

**COLD STEEL**®  
*World's Strongest, Sharpest Knives*

## ALL NEW ABSOLUTE PROOF INCLUDING ABSOLUTE SWORD PROOF

There is a huge, glaring difference between Cold Steel and our competitors in the knife industry and we want you to be aware of it. They are non-expert posers with no real world interest, experience, or ability with edged weapons. They rely on slick copy, gross exaggeration and the fulsome praise of their cohorts in the gun and knife magazines to separate you from your hard earned money.

In contrast, we at Cold Steel are real experts with vast knowledge and experience in all aspects of knives, swords and edged weapons and have the credentials and guts to prove it.

Nothing we can say illustrates the huge chasm that separates us from our competitors better than the 4th installment in our DVD series called "Absolute Proof". Designed from beginning to end to confound and refute the propaganda of our competitors and embarrass the gun and knife magazines that they have in their pockets while proving once again Cold Steel makes the world's strongest, sharpest knives and swords.

We invite you to watch for yourself as we put our knives and swords through a new round of horrific torture testing. See with your own eyes as they perform new feats of strength, sharpness and cutting power. Witness once more as Cold Steel raises the bar so high, our competitors are sure to faint and get nosebleeds and the magazines will be left speechless (as always). Gather your family and friends and get set for another wild ride as we once again offer "Absolute Proof" for all to see!

MOST OF THE TESTS SHOWN ON THESE PAGES AND IN OUR "ABSOLUTE PROOF" AND "ABSOLUTE SWORD PROOF" DVD'S ARE DANGEROUS AND SHOULD NOT BE DUPLICATED. ANY KNIFE CAN BE BROKEN OR DAMAGED IF SUBJECTED TO SUFFICIENT ABUSE. THESE DESTRUCTIVE TESTS CONSTITUTE GROSS ABUSE OF A KNIFE. DUPLICATING THESE TESTS OR ALTERING YOUR KNIFE WILL VOID YOUR WARRANTY. THE WARRANTY COVERS DEFECTS IN MATERIALS AND/OR WORKMANSHIP. IT DOES NOT COVER ABUSE OR THE EFFECTS OF NORMAL WEAR AND TEAR.

DO NOT USE YOUR KNIFE AS A PRY BAR, AXE, CHISEL, SCREWDRIVER, OR SAW. KEEP IN MIND THAT OUR SERRATED KNIVES ARE DESIGNED TO CUT FIBROUS MATERIALS LIKE ROPE AND THAT HARD MATERIAL, LIKE BONE, WIRE, AND METAL MAY DAMAGE THEIR EDGE.

## STEEL AND HEAT TREATMENT

### VG-1

When considering a new material for a performance upgrade for the Cold Steel® Tanto, we tested seven different grades of steel including Shiro 2, V-SP-2, 10A, 440C, VG-10, ATS 34, and VG-1. Physical testing for sharpness, edge retention, point strength, shock, and ultimate blade strength showed that while many of the steels had increased performance in one or two testing categories, only one, VG-1, showed the greatest performance increases in the most critical categories. With an outstanding ability to retain an edge and proven strength in point and blade tests, VG-1 will provide Cold Steel® customers with superior performance previously unavailable in a stainless steel blade.

### 4116 KRUPP STAINLESS

4116 is a fine grained, stainless steel made by ThyssenKrupp in Germany and is used for hygienic applications (medical devices and the pharmaceutical industry) and food processing which make it a superb material for kitchen cutlery. The balance of carbon and chromium content give it a high degree of corrosion resistance and also impressive physical characteristics of strength and edge holding. Edge retention in actual cutting tests exceeded blades made of the 420 and 440 series of stainless steels. Other alloying elements contribute to grain refinement which increase blade strength and edge toughness and also allow for a finer, sharper edge.

### AUS 8A STAINLESS

The words "stainless steel" are misleading, because, in fact, all steel will stain or show discoloration if left in adverse conditions for a sufficient time. Steel is made "stainless" by adding Chromium and reducing its Carbon content during the smelting process. There is a serious performance trade-off with stainless steel. As the Chromium increases and the Carbon decreases, the steel becomes more "stainless". But, it also becomes more and more difficult to sharpen, and the edge-holding potential is seriously impaired. This is usually why most stainless knives are rarely razor-sharp and quickly lose what little edge they have.

In contrast, at Cold Steel® we use AUS 8A Stainless, a high carbon, low chromium steel that has proven itself to be the ultimate compromise between toughness and strength, edge holding, and resistance to corrosion.

### SAN MAI III®

Our San Mai III® blades are comprised of three layers of laminated steel. Laminated construction is important because it allows different grades of steel to be combined in a single blade. A simple way to think of this type of construction is to imagine a sandwich: The meat center is hard, high carbon steel and the pieces of bread on either side are the lower-carbon, tough side panels. The edge of the blade should be hard to maximize edge holding ability, but if the entire blade was hard it could be damaged during the rigors of battle. For ultimate toughness the body of the blade must be able to withstand impact and lateral stresses. Toughness is generally associated with "softness" and "flexibility" in steel, so that, surprisingly, if a blade is made "tough" the edge won't be hard enough to offer superior edge holding. San Mai III® provides a blade with hard (higher carbon) steel in the middle for a keen, long lasting edge and tougher (lower-carbon) steel along the sides for flexibility.

### 1055 CARBON

1055 steel is right on the border between a medium and a high carbon steel, with a carbon content between 0.50%-0.60% and with manganese between 0.60%-0.90% as the only other component. The carbon content and lean alloy make this a shallow hardening steel with a quenched hardness between Rc 60-64 depending on exact carbon content. These combination of factors make this one of the toughest steels available because, when quenched, it produces a near saturated lathe martensite with no excess carbides, avoiding the brittleness of higher carbon materials. This steel is particularly suited to applications where strength and impact resistance is valued above all other considerations and will produce blades of almost legendary toughness.

### SK-5 HIGH CARBON

SK-5 is the Japanese equivalent of American 1080, a high carbon steel with carbon between 0.75%-0.85% and 0.60%-0.90% manganese. As quenched, it has a hardness near Rc 65 and produces a mixture of carbon rich martensite with some small undissolved carbides. The excess carbide increases abrasion resistance and allows the steel to achieve an ideal balance of very good blade toughness with superior edge holding ability. Due to these characteristics, this grade of steel has been used traditionally for making a variety of hand tools, including chisels and woodcutting saws, and has stood the test of time and use over many years in many countries.

## PERFORMANCE

Good looks are important, in knives as much as in life! Perfect fits, clean lines, precise grinds and beautiful polishes all add value and satisfaction when you buy a knife. Often, the true beauty of a knife only becomes apparent when the knife is used!

At Cold Steel®, we believe that all of our knives must perform. We insist all of our knives deliver extraordinary performance for their asking price — "they must deliver their money's worth".

In order to achieve this goal, we are vitally interested in all the elements that are critical to performance. When it comes to the blade, these include profile, thickness, blade geometry, edge geometry, steel and heat treatment. Every one of these factors is studied in minute detail to arrive at the optimum combination for a specific use. If the knife is a folder, we concentrate on the locking mechanism to ensure the strongest, safest construction. For handles, we strive to develop the perfect mix of materials and ergonomics to offer the most comfortable secure grip available. Above all, we TEST what we make! Rigorous testing is the only way to ensure we get the level of performance we demand.

## WARRANTY

We stand behind our knives 100%. We subject them to the highest standards in the industry and strive to make each one as perfect as possible. Our fixed blade sheath knives have a five year warranty to the original owner against defects in materials or workmanship. Our folding knives are warranted for one year.

## PARADOX®

Balisong or Butterfly knives, with their revolving handles, and strong locking mechanisms, have had a certain mystique since they were first popularized in the early 1980's. They were beguilingly simple in construction, looked a little intimidating in a user's hand, were relatively inexpensive, and there were many flashy ways to open them with a few deft turns of the wrist. In short, they were a knife industry success story.

There was just one downside. In the early 1990's, United States Customs outlawed the importation of all butterfly knives under, what can only be assumed to be, an arbitrary and unreasonable interpretation of the Switchblade Act. Many U.S. states soon followed suit including California, where mere possession of a butterfly knife is a FELONY.

But Cold Steel has produced a completely legal version of the butterfly knife that we call The Paradox®. It's designed from the ground up to specifically mimic a traditional Balisong or Butterfly knife in every respect but one — it can't be opened with one hand! That's right, the Paradox® is not a switchblade, gravity knife, or assisted opener and can't be opened without the use of both hands. So, while it looks and feels like a classic Butterfly knife, it isn't. It's a legal Balisong!

Its twin handles feature two integral springs that are similar to a conventional slip joint folder. They are designed to rotate 180 degrees around the blade's unique split tang and use strong opposing spring tension to lock the blade open or hold it firmly closed. Don't worry about it taking two hands to get it into action, since once it's opened it will never close inadvertently. Plus, its locking mechanism is impervious to the most violent stress and shock imaginable.

Every detail of the Paradox® is a testament to Cold Steel's renowned craftsmanship. The leaf shaped blade is hollow ground from imported Japanese AUS 8A Stainless (instead of the cheap steel used by our competitors) and, due to the latest advances in heat treatment, it offers a thin, ultra keen edge that lasts.

The skeletonized handles are CNC machined from solid billets of 6061 aluminum (instead of being cheaply cast out of zinc) and feature a hard-anodized coating to reduce scratches and oxidation.

If you're a Balisong fan, but don't want to take the risk of being arrested, the Paradox® is a terrific alternative. Clip it to your waistband or pocket where it screams "CUSTOM HAND MADE BALISONG".

# SPARTAN™

The word Spartan conjures up the vivid history of the battle of Thermopylae, a story of enormous courage in the face of devastating odds. The Spartans were a tough breed, trained from childhood in the art of war and inured to most privations, both mental and physical. Engaging them at close quarters was something to be feared and avoided, as their famous Kopis swords struck off arms and legs like a scythe in a wheat field!

Designed by Andrew Demko, the Cold Steel Spartan™ is a folding Kopis scaled down to accommodate the demands of a tamer, more sophisticated world. The 4 1/2" blade evokes the classic Kopis of the ancients with its characteristic recurved edge, big belly and sharp, acute point. It's hollow ground from Japanese AUS 8A stainless and has some similarities with a Kukri. Like the Kukri, the Spartan™ always presents its edge at an angle to the material being cut to produce a deep sheering effect. However, since its point is narrower and more acute than most Kukri blades, it stabs almost as well as it cuts.

The Spartan™ also echoes the ancient Kopis in its handle. It's designed to help the hand resist the pull of centrifugal force and to retard forward momentum, when stabbing, or backward movement, when hammering or smashing with its pommel. Injection molded out of Grivory with steel liners for strength, it's heavily contoured for comfort and features irregular fluting and a heavily textured surface finish for an exceptionally effective grip.

The Spartan™ has dual pocket clips to assure ambidextrous carry and for quick draw opening, it features a thumb plate that can be used to open the knife like a conventional "one handed opener" or be snagged on the edge of a pocket during the draw stroke and opened automatically. Additionally, the Spartan™ incorporates our Tri-Ad® locking mechanism (see page 4), which has proven, under torture testing to be almost impervious to stress, strain and shock. It's almost impossible to overcome and offers a huge margin of safety not found in our competitor's folders.

JAPANESE AUS 8A STAINLESS BLADES		

Being a police officer, deputy sheriff or state trooper is often a thankless job performed under dangerous and trying circumstances. Long shifts, mediocre pay, missed holidays and celebrations with family and friends, take their toll. Yet our nation's law enforcement officers continue to tirelessly serve their fellow citizens and provide the "thin blue line" that holds evil at bay and allows us to live in peace and prosperity.

Now Cold Steel is pleased to give these real American Heroes a pair of folding knives expressly designed to serve them – the American Lawman™ and the Mini Lawman. Built like a proverbial tank, they're comfortable in the most extreme environments and will shrug off the harshest abuse like water off a duck's back. They're super tough knives that can be relied on, even in life or death situations.

The drop point blades are "civilian friendly" in appearance yet big, wide, and most importantly, pointed enough for any cutting or piercing task. Made from Japanese AUS 8A stainless steel and hollow ground to a thin, hand-polished edge, they're as sharp as a serpent's tooth and will easily sever the toughest, most fibrous materials. To further protect the blades from rust and the constant exposure to inclement weather, they come with a black, non-reflective Teflon® finish.

Since law enforcement officers never really know what is in store for them from one shift to the next, we thought it was very important to make the handles as versatile and user friendly as possible. Supplied with dual pocket clips and twin thumb studs, they're completely ambidextrous and can be opened one-handed in a flash. Plus, due to their well thought out finger grooves, they're equally comfortable and effective in either a forward or reverse grip and can even be "choked up on" for tasks requiring extra fine edge or point control.

Keeping a firm grip on their knife when their hands are cold, wet, tired or oily is also a major priority for law enforcement officers. That's why we have equipped these knives with aggressively textured G-10 handle scales. They're lightweight, enormously strong, and most importantly offer terrific traction to the hand so the skin and flesh of the fingers will stick to them like glue.

Having the lock break on your folder is serious and may result in badly cut fingers. But if the lock fails on a police officer's knife, it could be a genuine disaster and result in loss of life or limb. That's why we have provided each American Lawman™ and the Mini Lawman with our Tri-Ad® locking mechanism. Designed to withstand terrific impact forces and weight loads transferred to its mechanism from the edge, point and even back of the blade, it has passed with flying colors and never failed even once despite being subjected to the most gruesome torture testing scenarios we could devise.

**TRI-AD LOCK**

**TRI-AD LOCK**

**TRI-AD LOCK**

ANDREW DEMKO

The stop pin receives all positive pressure (pressure on the cutting edge) and transfers it into the handle frame and liners where it can be more effectively absorbed.

Negative pressures on the lock produced, for example,

Undoubtedly, Cold Steel makes the safest, strongest, rocker-lock folders on the planet. It's one of many qualities that separates Cold Steel from our competitors.

Our latest improvement is our patent-pending Tri-Ad® lock. Andrew Demko is the originator of the Tri-Ad's® novel locking mechanism. It's a successor to a patented lock design originally created by the very talented John PerMar.

### THE "STOP PIN"...

The cornerstone of the Tri-Ad's® strength, among other subtle refinements, is the inclusion of a new "stop pin" which re-distributes the load of vertical positive and negative pressures on the lock.

by prying, digging, piercing or even abusive spine whacks are redistributed because the stop pin receives the forward pressure from the rocker and transfers it into the liners protecting the rocker and its pivot from failing.

### SELF ADJUSTING...

Finally, outside of keeping the lock free from the buildup of pocket lint in the mechanism, the Tri-Ad® lock requires very little maintenance. It's designed to be self adjusting, in the sense that, over time as parts begin to wear, the Tri-Ad's® design will allow it to adapt so the locking bar always wedges deeper in the lock channel between the stop pin and the shoulder of the precision cut tang notch. This feature allows for a very safe and secure lock-up.

POSITIVE PRESSURE—PRESSURE ON THE CUTTING EDGE—IS TRANSFERRED FROM THE STOP PIN INTO THE HANDLE FRAME AND LINERS WHERE IT CAN BE MORE EFFECTIVELY ABSORBED.

NEGATIVE PRESSURES ON THE LOCK ARE TRANSFERRED TO THE ROCKER LOCK, PUSHING IT FORWARD INTO THE BLADE TANG. THE STOP PIN EFFECTIVELY ABSORBS MOST OF THIS FORCE AND RE-DISTRIBUTES IT INTO THE FRAME AND LINERS.

THE BLADE IS SHOULDERED AROUND THE STOP PIN FOR INCREASED RESISTANCE TO WEAR AND TEAR. THE STOP PIN BUFFERS AGAINST, AND REDISTRIBUTES THE FORCE PRESSURE FROM THE BLADE.

THE FULL SURFACE OF THE LOCK AND BLADE TANG MATE FLUSH TOGETHER. THE SLIGHTLY ANGLED LOCK TENDS TO FORCE THE LOCK INWARDS UNDER PRESSURE INSTEAD OF OUTWARD.

EXTRA SPACE IS PROVIDED TO ALLOW THE ROCKER TO FALL DEEPER INTO THE NOTCH OVER TIME IN RESPONSE TO NORMAL WEAR AND TEAR.

THE ROCKER LOCK PIN HOLE IS MADE WITH EXTRA SPACE ON EITHER SIDE TO ALLOW FOR SELF ADJUSTMENT.

# VOYAGER® SERIES

Our Voyager® folders are, ounce for ounce, far stronger than 99% of our competitor's folders. And this is a fact, not an idle boast.

Each knife features laser cut and hand fitted parts with a stiff spring and our incomparable Tri-Ad™ lock mechanism which is arguably the strongest, most reliable, low maintenance lock in the world.

The thick, extra wide blades in each Voyager® also put the competition to shame, as they are laser cut from our famous VG-1 San Mai III® steel and precision ground to a thin edge for maximum shearing potential. This thin edge also allows us to hone the blades to astounding sharpness. Plus, the cutting surface is continuously curved along its entire length for the most efficient and effective slicing action possible. Additionally, because of their perfect heat treatment and the high carbon content in the center layer of VG-1 San Mai III® you'll find the sharpness really lasts a surprisingly long time.

If you like serrations, you'll really appreciate our exclusive pattern. It features groups of very small, sharply pointed teeth separated by wide, shallow arcs so it will rip smoothly yet very aggressively through a wide variety of tough fibrous materials without snagging or hanging up.

The Voyager® Series also offers all the other latest refinements in lock-back construction including lightning quick, one-handed opening, state of the art mechanical fasteners, massively oversized pivot pins that are fully adjustable and properly hardened, and dual stainless steel pocket clips for ambidextrous carry and deployment.

The Grivory handles feature 6061 heat treated aluminum liners for the utmost in strength and stiffness and are ergonomically designed to afford a wide array of grip options including the palm reinforced forward grip for which they are particularly well suited.

Grivory is unparalleled as a handle material as it is considerably stronger than Zytel® and, when deeply textured, offers a terrific non-slip grip. As an added bonus, it's impervious to moisture and won't crack, warp or shrink and remains remarkably resistant to abrasion or discoloration.

As tools these lightweight, super sharp knives are appropriate in almost any environment from hunting and camping to hiking and general utility chores. They can also readily fill specialty functions such as a boat or river knife, chute knife or police/military and survival/rescue applications.

## AK-47 SERIES

In 1947 Mikhail Kalashnikov, the legendary Russian gun designer, created the AK-47 assault rifle. Eventually adopted by the Red Army in 1949, it became famous as the "People's Rifle". Such renown was well deserved, as it was an utterly reliable weapon. It was rugged, simple to operate and maintain, economical, and effective at reasonable ranges. This weapon, and all it represents became the inspiration for our heavy-duty tactical knives, the AK-47 folders. Designed by Andrew Demko, the AK-47's possess all of the attributes of their namesake, and perhaps a few more.

They're built for hard and rugged use and are available in two sizes. Both sizes have many features in common. For instance, both are equipped with G-10 handles that offer a vigorous grip that is remarkably tough, rigid and incomparably strong. Also, each size comes with a unique pommel made out of 6061 aluminum. The pommels feature a lanyard hole and can also serve as a "less than lethal" percussion tool in a self-defense situation.

Additionally, the hollow ground blades are honed by hand until they reach levels of sharpness only seen on a surgeon's scalpel. They're made from Japanese AUS 8A Stainless steel, then vacuum heat-treated and sub zero quenched for maximum toughness. The blades are coated with black Teflon® for corrosion resistance and to enhance cutting power and to improve edge retention by reducing friction.

To compliment such exceptional blades we have paired them with our state of the art Tri-Ad® lock. In our testing, the Tri-Ad® has proved to be superior to any other lock on the market today in terms of overall strength and resistance to shock induced by blows on the spine (eclipsing virtually all locks in short order) or the even more devastating shock by over-strike that lands on the handle.

Finally, to assure easy access, and swift operation, the AK-47's come with an ambidextrous pocket clip and our new patented thumb plate. The thumb plate has a dual purpose, it allows the knife to be drawn and quickly opened by snagging it on the edge of a pocket or it can be used like a conventional thumb stud or disc for easy one-handed opening.

## RECON 1® SERIES

Cold Steel is famous for raising the bar in the knife industry and our Recon 1® tactical folders are setting a standard that's hard to beat. Why? Because they are as tough as nails and will cut like a chain saw! Every facet of their construction has been over engineered to make them as strong, durable and effective as humanly possible. The blades are made out of imported Japanese AUS 8A stainless steel that's been vacuum heat treated and sub-zero quenched and the handles feature G-10 laminate scales artfully contoured and scalloped for a terrific non slip grip. Plus, they are held together by the latest in high strength mechanical fasteners and further anchored by a 6061 heat-treated spacer. To compliment their super tough blades and handles they are equipped with our revolutionary Tri Ad lock™ (see page 4), which practically precludes lock failure.

To compliment their tactical mission we have given each blade a tough, black, Teflon® finish. Our testing has shown this coating offers three major advantages for tactical blades. First, it helps the blade to resist rust. Second, it eliminates glare and light reflections, which may give its user away. And third, it's a superior lubricant, which causes the blade to slip through even tough material with markedly less friction. This means you can cut deeper and far longer than with a non-Teflon® coated blade. To make the Recon 1® as easy to open and carry as possible we have equipped each knife with a thumb disc and small extra strong pocket clip. This clip is completely ambidextrous so lefties please take note. What's more its small size doesn't abrade or irritate the palm under protracted use.

Thin, light, sharp and incredibly tough, the Recon 1® is willing and able to aid you on your next mission!

## TRIPLE ACTION®

Packing an awesome punch, Cold Steel's® Triple Action® proves that the power and strength of a formidable cutting tool doesn't require a folding knife with the weight of an anvil.

Closing to a length of about 5 inches and weighing only 3.7 ounces, the Triple Action® Folding Knife is a dynamite innovation.

A super-tough blade of VG-1 stainless steel provides superb cutting ability in the world's finest combination of blade strength and flexibility. The aircraft grade aluminum handle (roll engraved with a distinctive pattern) gives the Triple Action® an exceptional look, and the pocket clip makes it easy to carry.

Cold Steel's® Triple Action® Folder is among the safest knives you can carry. When closed, the blade is totally encapsulated by the locking cover, and when open the solid aluminum construction and heavy-duty lock prevent the blade from closing. So, the Triple Action® Folder is as strong as (or possibly even stronger than) a butterfly knife while also being legal to carry in most states where the butterfly is banned.

When fully opened and ready for action, the Triple Action® Folder is a force to be reckoned with. Its solid construction makes it very stiff, strong, and unyielding in tough situations, giving its user confidence in its effectiveness and eliminating any fear of breaking the knife.

Remarkably well suited for use as an impact weapon to attack an opponent's nerve centers and repel or subdue an assailant, the closed Triple Action® serves admirably as an improvised "Yawara" stick. Because it is extremely thin and flat, the hand encircles it comfortably and completely, promoting a very secure grip, which will allow the striking of powerful blows.

## ESPADA® SERIES

In the late 1500's a new breed of men sprang from the impoverished soil of the Extremadura region of northwestern Spain and sailed to the New World to seek their fame and fortune. Small in number and armed with little more than the cloaks on their backs and an Espada (sword) in their belts, they cut a bloody path through impossible odds to emerge as Conquistadors of everlasting fame and glory.

Today the opportunity to explore many new worlds and conquer entire nations at the point of a sword has faded but riches, fame and glory are still to be won and available to the "well armed" in great abundance. Carve out your share with the folding sword of the future we call the Espada®.

Available in three sizes to suit the bold, the bolder and the boldest, the Espada® was designed by custom knife maker Andrew Demko and Cold Steel® President Lynn C. Thompson. Their goal was to harness old world craftsmanship with new world advancements in mechanics and materials to create a new series of tactical folders for today's Conquistadors.

Like the swords of old the Espada's are not for the weak, timid, faint of heart or those desiring another spring assisted play toy. Just pick one up and you'll see what we mean! Definitely not politically correct, they are huge yet surprisingly well balanced and feature dramatically upswept clip point blades that are ideal for cutting, slashing and piercing. Made from vacuum heat-treated and sub-zero quenched Japanese 8A stainless steel and hollow ground to a thin, razor sharp edge, they will cleave through just about any obstacle or target in their path.

To make your hand the real master of these awesome blades we have paired them with state of the art pistol grip handles. Strongly curved and equipped with multiple finger grooves and even a sub-hilt in the two larger models, they work perfectly in either a forward or reverse grip while offering unprecedented retention and reach through multiple grip extension options.

To minimize overall weight and maximize strength and rigidity, we have CNC machined the frames and integral bolsters of the Espada's handles from 7075 Aluminum billets. While quite costly, this material rivals even Titanium in strength and can endure years of the hardest abuse. Finally to make the handle as beautiful as it is effective and strong, we have mirror polished the dovetailed bolsters and attached glossy black G-10 handle scales using the latest high tech fasteners.

We don't believe any tactical folder can make a credible claim to being a "pocket sword" without possessing an incredibly strong and reliable lock and the Espada's are no exception. That's why we have equipped each model with our new multi-patented Tri-Ad® lock. Designed by Andrew Demko, the Tri-Ad® is unsurpassed in resisting positive pressure from the edge (cutting, slashing and chopping), negative pressure from the point (piercing, digging and chiseling), and impact pressure (whacks on the back of the spine of the blade) by diverting these forces first to its unique stop pin and then throughout the entire handle frame.

At first thought, carrying a "pocket sword" as big and heavy as the Espada may seem impractical. However, after much experimentation, we have found this is not the case. Even the biggest model can be carried discreetly and unobtrusively in the front pocket of most pants and when clipped to the waistband and covered by a "bloused" shirt or sweater they totally disappear. Then in an emergency they can be drawn and opened in a single motion by snagging the patented thumb plate on the edge of a pocket.

## TI-LITE® SERIES

Our Ti-Lite® tactical folders evoke the sleek speed and rebellious lines of the classic 1950's-styled switchblade. Unlike most switchblades however, they are legal to carry nearly everywhere.

They feature Japanese made AUS 8A stainless steel blades with a bead blast finish, razor sharp edges and sturdy, needle sharp points. The CNC milled handles are forged from super tough 7075 Aluminum billets (known to be as tough and strong as Titanium) and are given an attractive bead blast surface and finished with a protective EDP (Electric Discharge Plating) coating. And for maximum strength and safety, we have equipped our Ti-Lites® with our patent pending, stainless steel leaf spring locks (proven, in our tests, to hold 130 lbs).

For ease of carry, the Ti-Lites® come equipped with a small, but unobtrusive steel pocket clip, and can be opened rapidly by using the thumb studs or by snagging a quillion on the edge of your pocket as you draw your knife out.

We are grateful to custom knife maker, Phil Boguszewski, for his design influence and help in the creation of the Ti-Lites.®

## ZYTEL® TI-LITES®

We know that many of our customers love the look of our Ti-Lites® but find the prices a little steep. This is the reason we decided to create some affordable alternatives. The Zytel® Ti-Lites® mimic the look of their more expensive counterparts almost exactly. Instead of 7075 Aluminum, we used 43% glass filled Zytel® for the handles.

The results are extraordinarily lightweight knives that are remarkably strong, sharp and good looking, at a price almost everyone can afford.

## HATAMOTO®

In feudal Japan one of the most highly coveted titles among a lord's high-ranking retainers was "Hatamoto". The fortunate Samurai on who this distinctive honor was bestowed was allowed immediate access to his lord, day and night, and was deemed trustworthy enough to wear his sword in his lord's presence.

Like its namesake, the Hatamoto® was designed to be a knife worthy of great respect and trust. A knife you will treasure for years and one you can bet your life on in a pinch. The San Mai III® blade, has been precision hollow ground, and for piercing power it features a modified tanto point (first popularized by Lynn C. Thompson in the early 1980's). It pierces like a dagger yet remains resistant to bending or breaking. For cutting power, the edge is subtly curved and ground thin and honed to razor keenness so it will "bite" with even moderate pressure and deliver dramatically deep, gaping cuts with full power blows.

To have this remarkable blade come alive in your hand we have crafted a simple, highly efficient handle that will accommodate a wide variety of grip styles. For strength, rigidity and security, we have resolutely insisted on thick Titanium liners for the frame and overlaid them with high friction G-10 scales that have been reinforced by forged Titanium bolsters. All handle components have been bolted together with the latest in high strength fasteners to form one homogenous unit of great strength and moderate weight.

Lock strength is critical in a knife like the Hatamoto®, that's why it's equipped with the most reliable leaf spring locking mechanism available. Made of Titanium and fitted to extremely close tolerances, it has proven almost impervious to the stress and shock that would destroy a lesser knife costing three or four times as much.

Quick access and convenient carry are also attributes of the finest tactical folders so we have outfitted the Hatamoto® with a sleek yet effective pocket clip and thumb stud for lightning fast opening.

## CALEDONIAN EDGE™

For almost a decade, Cold Steel® offered a small, wicked looking, boot knife called the Culloden®. It was based on the traditional Scottish "Black Knife" or "Skean Dhu", as it was more commonly referred to, in Gaelic, the ancient language of Scotland.

Our Caledonian Edge™ features a number of modern variations and refinements on its older predecessor. The San Mai III® blade is virtually unbreakable, and, like the original Skean Dhu, features a thin, acutely pointed tip that's as sharp as the proverbial needle. It glides effortlessly through even the most puncture resistant materials. Additionally, its precisely and carefully hollow ground blade has been honed so sharp, it will shave hair from your arm as if you were using a straight razor.

The traditional jimping seen on the Skean Dhu of old has been retained and provides an aggressive, non-slip platform for one's thumb and forefinger, allowing for better control when using the blade to cut or pierce.

The Caledonian Edge's™ handle sports a palm-hugging profile and a relatively thin cross section that augments its covert qualities. It's flat enough to resist rolling or twisting in one's palm yet comfortable enough to accommodate a wide range of gripping styles. A perfect blend of strength and beauty, it features a superstructure of attractive, highly polished, black Micarta scales and custom Titanium bolsters that are bolted, utilizing the latest in high-tech fasteners, to a strong, yet lightweight Titanium liner substructure.

The Caledonian Edge's™ leaf spring locking mechanism will protect your fingers from its sharp edge. It's made from Titanium and is hand fitted to the closest tolerances possible. It's incredibly tough and reliable even when exposed to our most brutal tests.

For discreet carry and immediate access, the Caledonian Edge™ comes with a brightly polished stainless steel pocket clip and thumb stud on the blade. This arrangement allows a wide variety of carry options as well as lightning quick one handed opening.

## SAFE KEEPER® SERIES

Here are perhaps the finest production push knives in almost 150 years. They have the cutting and piercing potential of a larger knife, but are small enough so that they can be easily attached to tactical web gear, tucked in a waistband or boot top, or even strapped to a wrist or ankle.

### SAFE KEEPER® II

Designed for the twenty first century, the Safe Keeper® II is the ultimate push knife. Just the look of this knife with its wicked blade jutting out from the fist is enough to deter almost all aggressors. And, if action is necessary, the Safe Keeper's® shock absorbing Kraton® handle imparts devastating punching blows, yet is so secure in one's hand that it's practically impossible for even a novice to be disarmed.

### SAFE KEEPER® III

The Safe Keeper® III offers outstanding versatility, especially as a boot knife. Its light weight and overall length of five inches make it the perfect combination of small size and big performance.

The single edged design of the Safe Keeper® III means you can safely "choke up" on the blade for extra fine work, while the false edge provides superior point strength. With only one sharp edge, the Safe Keeper® III can double as a rescue knife.

## BRAVE HEART™

The highland warriors of Scotland's distant past carried a small yet lethal knife with a distinctively carved wooden handle. It was called the Skean Dhu (which means "Black Knife" in Gaelic, the ancient language of the British Isles). Typically, a kilt clad warrior carried it covertly on his person or wedged in his stocking top.

Cold Steel's latest version of this romantic and historically significant knife is called The Brave Heart.™ Designed by Lynn C. Thompson, it is a small, compact, multi-purpose knife that will serve admirably as an hunting or utility knife or as an alternative to a double edge boot knife. The thin, needle sharp tip is ideally suited for piercing, and the precision taper ground blade has been honed by hand to razor sharpness. The traditional jimping on the blade spine is both ornamental and functional, providing an aggressive non-slip platform for the thumb or forefinger to bear downward as needed for maximum control.

The compact Kraton® handle is designed to accommodate a wide variety of comfortable and secure grip positions, and its slim, flat cross section insures that it will resist turning or twisting in the hand. Kraton® is a superior handle material that Cold Steel has employed for decades because its robust traction and resiliency allows it to withstand the shock of even the hardest blows.

The Brave Heart™ comes complete with a conveniently lightweight, yet sturdy, Secure-Ex® sheath that's been specially designed for an inconspicuous presence. It comes with a detachable boot/belt clip and lashing slots so you can wear or carry it everywhere you go.

## STEEL TIGER®

Cold Steel has always contended that the Karambit is a specialized style of knife with unique but limited uses. It is also, however, quite popular. So, in response to the many requests from our customers, and with the help of custom knife maker, Steven Likarich, we proudly introduce the Steel Tiger®, our interpretation of this ancient Indonesian knife.

It possesses all the best features of the classic Karambit and unites them with modern styling and materials, and, best of all; we've kept it very affordable.

The broadly curved Japanese AUS 8A stainless blade is beautifully polished, taper ground, and vacuum heat-treated and sub zero quenched for maximum strength, cutting power and edge retention.

But it's the grip that really distinguishes it from the competition. Designed for comfort, strength and ease of use, it features a tough Grivory® core that encapsulates the tang, emerging as the bolster/thumbshelf and distinctive finger ring. This core is then overmolded with Kraton®, which yields more to hand pressure than Grivory, and in turn, creates a superb, non-slip grip.

For safety, convenience and quick access, the Steel Tiger® comes with a sturdy Secure-Ex® sheath that you can lash to your gear or retain on your person via the removable boot/belt clip.

#29TGXTH GUNSITE

#29TGLTH GUNSITE II

## GUNSITE™

Cold Steel scores a direct hit with the Gunsite™ folders – the first authorized and official knives of the Gunsite™ training center.

Boasting our state of the art, Tri-Ad® lock (see page 4), you can count on them when your very life's at stake as their locking mechanism has proved unsurpassed at defying the impact, shock and stress that regularly breaks locks on lesser knives. Offered in two sizes, their Tanto style blades are laser cut from VG-1 San Mai III® and are much wider, thicker, and stiffer than any competitor. Ground thin at the edge then honed to razor sharpness, they deliver all the cutting, slashing, and shearing power you could want, not to mention their fantastic penetration.

Available with Grivory® handles, they defy the elements and fit the hand like a glove due to their deeply checkered textured gripping surface and oval cross section that's just thick enough to provide the strength and rigidity required without being too thick or bulky.

Nothing else can begin to compare to the fit and finish of our Gunsite™ Folders with laser cut parts, superbly polished and hand fitted, they rival the best custom folders and exceed them in strength and performance. Like our Voyagers®, the Gunsite™ Folders come with two pocket clips for easy, convenient and ambidextrous carry.

## DOUBLE AGENT®

Cold Steel's Double Agent® neck knives possess a significant set of advantages worth noting. Designed by Zach Whitson, with either a Karambit or Clip Point blade style, they're thin, flat, and super light (a little over 3 ounces including sheath). This makes them easy to conceal and very comfortable to wear. Their most audacious and notable feature, however, is their double ring handle design. Slip an index finger through the front ring nearest the blade and your pinky finger through the rear ring and close your fist to obtain a forward grip and vice versa for a reverse grip.

It doesn't matter how hard you cut, chop, hack, hammer or thrust with the Double Agent®. Its twin rings will always prevent your hand from sliding forward on the razor sharp edge and will likewise resist the effects of centrifugal force or the efforts of an adversary to wrest the Double Agent® from your grasp.

## COUNTER POINT II

Our Counter Point II offers almost all the same benefits as our Counter TAC boot knife series but in a smaller, lighter, and more easily concealed package. The blade is a classic boot knife shape with a long false edge and a needle sharp point to guarantee the ultimate in penetration. Made from VG-1 San Mai III® steel, it boasts a gorgeous satin polish and comes sharp as a razor.

The handle of our Counter Point II is also reminiscent of our Counter TAC's. It's injection molded from Grivory and has steel liners to enhance its strength and rigidity. It offers an unusually secure grip for its diminutive size. It's carefully sculptured and contoured with strategically placed holes to reduce weight, and sports a unique thumb rest built into the butt, which affords excellent purchase and a wide variety of grip options.

While no folding knife can ever hope to compete with a fixed blade boot knife in overall strength, our Counter Point II comes much closer than any competitor in its size range due to its revolutionary Tri-Ad™ lock. Designed to withstand horrendous stress and strain, it shrugs off impact from any angle without fail and offers a huge margin of safety for your precious fingers.

To enable your Counter Point II to be swiftly drawn and ready for action we have equipped it with a fully ambidextrous pocket clip and thumb stud. Clipped to a boot top, pocket or waistband, the Counter Point II is just about invisible and at 2.8 ounces, it's so light it truly can be carried 24-7.

## COUNTER TAC™

It's been observed that fashion is fleeting. What's "in" now will soon be "out" of style. The knife industry, like any other, is subject to the same winds of political correctness and notions of popular taste. At Cold Steel, we try to stay abreast of the currents of change, but we also recognize that good design never goes out of style. The Cold Steel Tantos, Trail Master, and Voyagers illustrate this point very well.

Our new Counter TAC™ boot knives were designed with this simple philosophy in mind. The full tang blades are made from beautifully polished AUS 8A Stainless steel that's vacuum heat treated, and sub zero quenched for strength. They are hollow ground and end in a sturdy, but needle sharp point that's ideal for effortless penetration, and of course the edge is razor sharp.

The ergonomic design of the Kraton® grip is comfortable and adaptable to any fighting style, and the deeply textured surface and double guard will insure that the knife is not likely to slip from your hand under any circumstances.

Finally, each Counter TAC™ is shipped with a state of the art Secure-Ex® sheath, so you can carry or conceal it just about anywhere.

## POINT GUARD

We think our new Point Guard offers several features that are sure to appeal to any neck knife aficionado.

Inspired by a Fred Perrin custom knife, it's thin, flat, light as a feather, and comes complete with a terrific Secure-Ex® sheath.

FRED PERRIN

Without a doubt, what really sets it apart from the competition is the big advantage it offers in overall length, and its blade to handle ratio.

These advantages are made possible because the Point Guard's fiendishly sharp, slant point blade includes an integral finger hole, which in turn makes possible the use of an abbreviated pistol grip handle. It's fitted with G-10 scales and skeletonized to save weight, making it a natural in the forward-reverse grip. And, thanks to the integral finger hole, there's no possibility of the hand moving forward onto the blade on impact or losing control of it due to the effects of centrifugal force.

#43NSK Mini Pal™

## MINI PAL™

For a small knife, the Mini Pal™ delivers heavyweight performance. It has an edge that zips through a host of materials at unbelievable speed. And, since the one inch long blade is razor sharp, it will open delicate packages and envelopes, cut rope or punch through heavy cartons with ease.

Also, the newly redesigned Kraton® handle totally encapsulates the tang and part of the shaft, for increased comfort and improved control.

## MINI TAC™ SERIES

Cold Steel's Mini Tac Neck Knives are astonishingly lightweight, so much so, they can be comfortably worn practically 24 hours a day.

With their sturdy bead chain lanyards and their rugged Secure-Ex® sheaths (specially designed to snugly retain the knife while allowing a speedy draw stroke), they can be worn outside clothing and perform as a handy utility or rescue knife. They can also be carried more discreetly under a shirt or blouse, or inside a coat. They can even be used for camping or hiking as they can easily be tied or taped anywhere from a backpack to a fanny pack. Their versatility is virtually endless.

Fashioned from AUS 8A stainless steel and reflecting state of the art heat treatment they are honed to a razor edge and exhibit incredible toughness for such a small knife, due in part to their full tang construction.

Tough, rough, and ready for anything, they come equipped with thin high quality black G-10 handle scales. This feature allows them to lie flat and close against the body and provide an aggressive gripping surface. Also when these scales are combined with integral sub hilt they give the fingers of the hand incredible purchase and allow a remarkably secure grip that resists rolling or twisting.

### BEAVER TAIL:

Offers a super wide blade with a long shallow "V" cross section that's ideal for cutting and shearing or piercing. It makes a great all around field knife too and will prove equally useful outdoors at camp or at home in the kitchen.

### SKINNER:

Provides a long, curved cutting edge with a sharp point. It's ideal for cutting slashing and skinning strokes. It's been extensively field-tested in Australia where it single handedly caped a huge buffalo slicing through neck skin over 1" thick!

### KIRIDASHI:

This blade shape is derived from the traditional Japanese pocket or utility knife. It can be used for whittling, carving, paring or virtually any chore you can think of. It offers a very acute point for all those hard to reach jobs.

### TANTO:

For a knife this size, our Mini Tac™ Tanto offers a remarkably wide, stiff blade and a very sturdy reinforced point, making it ideal for piercing even tough, hard objects. As an added bonus, its wide blade allows for a very generously sized hollow ground blade bevel and an extra keen edge so it can cut almost as well as it pierces.

## SAFE MAKER® SERIES

Cold Steel has been making push knives for a quarter century. In those twenty five years we have continually been refining our designs, discarding features that didn't perform as well as we would have liked and enhancing those that did. These blades, and the wealth of experience that has gone into their manufacture, have paid off handsomely for Cold Steel as they have generated quite a following among law enforcement and military personnel around the world. This is because they offer "big knife" cutting and piercing potential in a very compact, easily portable size and, unlike a revolver or semi automatic pistol, they never break, malfunction, or run out of ammunition.

Designed by Lynn C. Thompson, our Safe Maker® push knives are, without doubt, the finest commercially made push knives in the world. The blade, shaft, and "T" shaped tang are all drop forged from one piece of Japanese AUS 8A Stainless Steel. This process, though costly, eliminates any unwanted sharp edges or surfaces that would irritate the hand or fingers when the knife is clasped in a closed fist, and it produces a better knife, since the subsequent vacuum heat treatment and sub zero quench renders the blades virtually unbreakable.

Well made blades deserve equally well-made grips. A lot of time and energy went into the production of our "T" shaped handles. Made of shock absorbing Kraton® they totally encapsulate the tang and part of the shaft so they can be comfortably and securely grasped in the fist with the blade jutting out between the fingers and used to deliver absolutely devastating punching and slashing blows.

The Safe Maker® knives are available in two sizes; each includes an easily concealable and sturdy Secure-Ex® boot/belt sheath. The smaller version includes a steel bead chain lanyard so it can be worn as a neck knife.

BOTH SAFE MAKERS® HAVE A HOLLOW GROUND BACK.

#53JD  
URBAN DART™

THE PHOTO BELOW SHOWS THE BACK SIDE OF THE URBAN DART™

## URBAN DART™

The Urban Dart™ is our rendition of a similar knife the late Bob Enghath designed over twenty years ago. With elegantly simple lines and an economy of purpose, the Urban Dart™ is reminiscent of our Spike® series but with a few differences.

The blade represents a huge advance for Cold Steel in knife making technology. We have spent literally years trying to find a way to satisfactorily manufacture this type of blade. Ultimately our factory in Japan developed a method to drop forge successfully the triangular cross section this knife required. With the addition of precision hollow grinding, superlative polishing, and highly skilled hand sharpening, we were able to produce at last this lethally wicked blade.

The simple teardrop shaped Kraton® handle is small and thin. It gives extra traction to the fingers and protects the palm when the knife is used like a push knife or when using palm reinforced grip styles.

Our Urban Dart is also available with a gorgeous Sanbar stag handle. Until recently Sanbar horn has been almost impossible to acquire, so act quickly as we don't know how long we will be able to continue to offer it.

## THE SPIKE® SERIES

The Spike®, which was designed by custom knife maker Barry Dawson, is a weapon pared down to its most basic elements. This seemingly simple knife features a thick, yet narrow blade which is distal tapered and flat ground down to a zero edge. This creates a unique cross section that facilitates both penetration of the tip and a cutting power previously unknown in such a thick, narrow blade.

The integral handle of The Spike® complements its simple, minimalist qualities. It has been carefully shaped out of solid steel, then wrapped with black cord. All of the hard-corner edges on the grip have been softened or "melted" to be more rounded so their contours won't irritate one's hand. Each spike comes with a sturdy Secure-Ex® sheath and steel bead lanyard so you can wear it around your neck or lash it to a "D" ring, fanny pack, or other gear.

ALL THE KNIVES IN THE SPIKE® SERIES COME WITH A SECURE-EX® NECK SHEATH WHICH FEATURES A BEAD CHAIN LANYARD.

**RECON SCOUT®**  
IN VG-1 SAN MAI III®

In almost every respect, the Recon Scout® is simply a 7 1/2 inch Trail Master® Bowie (See page 27). It offers the same steel, heat treatment, blade thickness, blade shape, and handle.

Unlike other combat knives, the Recon Scout's® broad clip point is highly resistant to bending or breaking. It's ideal for long range cutting and slashing. Additionally, the blade is equipped with a slightly concave false edge that measures approximately 3 1/2" long.

Like the Trail Master®, the Recon Scout® has a slight curve along the entire length of the blade. This curve allows the blade to be used in a draw cut as well as a chopping stroke. Plus, the extra curve near the tip provides plenty of "belly" for emergency field dressing and skinning.

The Recon Scout comes with a tough Cordura sheath.

**OUTDOORSMAN®**

We have had a lot of friends ask us to bring back the Outdoorsman.® So we have dusted off the tooling and made a new run. Only this time, we have added two new improvements. The first is jumping on the blade back. This gives the thumb and index finger more control of the edge as they now have a non-slip platform to rest on. The second is a chopping edge, or bone breaker. In our tests, this edge hacked through everything we put in front of it, including heavy gauge steel wire, so it's sure to stand up in the field!

The Kraton® handle is reminiscent of our Tanto series with its distinctive oval cross section and non-slip, deeply checkered surface.

As before, the Outdoorsman® comes complete with a heavy leather sheath, fitted with a brush proof retaining strap.

**BLACK BEAR CLASSIC**

This classic sub-hilt design fighter was first developed by Bob Loveless, one of the founding members of the knife maker's guild. It is perhaps the quintessential combat knife of the modern era. Its eight inch long blade offers excellent reach and incredible penetration requiring very little physical effort on the user's part. Additionally, the sub hilt practically eliminates the possibility of one's hand being dislodged or coming into contact with the blade's sharp edge. The sub-hilt also has the advantage of facilitating rapid, and practically effortless, withdrawal after insertion.

Versions of this design are available virtually everywhere and are offered by hundreds of custom knife makers at prices ranging from \$450 all the way up to several thousand dollars. However, with the introduction of the Black Bear Classic, Cold Steel made it possible to get superior sub-hilt performance at a more reasonable price.

The Black Bear Classic's VG-1 San Mai III® blade is made from the same stainless steel that is found in our famous Tanto series. The blade is perfectly heat treated and a double grind is expertly applied by skilled craftsmen. Then the surface of the blade is polished to a beautiful satin finish, and the edges are honed and buffed to hair shaving sharpness!

The black linen Micarta scales are fastened to the blade tang by 6 stainless pins and expertly hand shaped and contoured. Then the handle, including the 300 series stainless guard and sub hilt is buffed to a lustrous shine that will rival the finest custom knives!

It comes complete with a sturdy Secure-Ex® sheath.

**R1 MILITARY CLASSIC**

This design first appeared in 1942 and was quickly adopted by troops during World War II who were looking for a quality, dependable knife. Since that time it has seen action in every major conflict from Korea all the way to the Persian Gulf. And now you can own an exact replica of this original classic and get it for a very reasonable price. But make no mistake, our R1 Military Classic is not just a showpiece, it's a high performance combat weapon.

The VG-1 San Mai III® blade is expertly crafted from stainless steel and is 3/16" thick. It is flawlessly ground, hand fitted, polished and then honed until it will cut at the slightest touch.

For strength and beauty, the double guard has been meticulously fashioned from a single piece of highly rust resistant 300 series stainless steel (instead of brass or nickel silver that can tarnish). It sports an extremely buffed and polished surface that will continue to gleam despite the ravages of time and weather.

The handle is made from solid black linen Micarta. This is extremely costly, but nothing else looks or lasts like Micarta! Each one is contoured and shaped until perfect then permanently mated to the heavy blade tang with attractive colored fiber spacers. The final assembly is then buffed and polished to a fine luster.

The R1 has a heavy duty brown leather sheath featuring a Norton Fine India stone and pouch. It's built for hard service and is designed to fit virtually any belt including a G.I. pistol Belt!

# THE SIXTH ANNUAL COLD STEEL CHALLENGE VENTURA, CALIFORNIA

This is your chance to test your martial skills and years of training and be able to do it in a safe, respectful environment. \$10,000 worth of Cold Steel product will be awarded overall to the top competitors who compete in our fighting contests and our throwing events. There will also be incredible buys on the complete Cold Steel line of products in our sales area, all at irresistibly low prices.

Complete contest rules and a list of events will be posted on our website soon. For more information, maps, and photos of previous year's Cold Steel Challenges, go to our website at [www.coldsteel.com](http://www.coldsteel.com)

## SEPT. 25TH, 2010

## BATTLE READY CLASSICS IN SAN MAI III®

All of the knives featured in our Battle Ready Classics Series have been made by Cold Steel® for many years and are well proven in the field as well as in hand to hand combat. Frankly, we have been scratching our heads trying to figure out how we could improve them without drastically raising their price.

The answer was to offer them in our famous San Mai III® steel. Made in Japan according to our strict standards since the mid 1980's, San Mai III® has proven unsurpassed in strength, toughness, sharpness and ease of re-sharpening. Over the years, other "super steels" have come and gone but San Mai III® remains as the most proven high performance stainless steel in the world. If you want a combat knife you can bet your life on, and reasonably priced, check out our Battle Ready Series as we have the knife for you.

MASTER  
HUNTER®

**MASTER HUNTER®:** Modesty seldom comes into play when we are describing how good our knives are. But in the case of the Master Hunter®, we've been unquestionably negligent in that department. So, modesty aside, we want to go on record and say, without a doubt, the Master Hunter® is the best hunting knife you can obtain at any price.

It features a broad VG-1 San Mai III® blade that's been flat ground to achieve the ideal blade cross-section and edge geometry. Carefully honed to razor sharpness, its edge cuts effortlessly while its dropped point simplifies the chore of field dressing and skinning.

The spine of the blade is a full 3/16" thick to allow for the necessary strength and stiffness to field dress and skin the biggest animals like elk, moose, brown bear, and the African Dangerous Seven.

The grip is specially designed to promote long use without fatigue. Made of the shock absorbent, slightly tacky feeling Kraton®, and featuring our deeply checkered surface, it positively won't slip no matter how wet or bloody your hands get. Plus, Kraton® has specially enduring advantages in that it will never rot, shrink, crack, splinter, or mildew. For safety, the Master Hunter® comes in a thick, heavy Conceal-Ex™ sheath that will accommodate just about any size belt and allow you to carry it all day without fatigue.

**MASTER HUNTER® PLUS:** Grossly underrated by the magazines, the Master Hunter Plus shares most of the design features of its brother with one terrific addition; a gut hook. Extensively tested in Australia, it was used to field dress dozens of Buffalo, Red Deer, Fallow Deer and Wild Boar. It opened the body cavity without piercing the entrails as easily as you would un-zip a jacket. Don't let another season pass without a Master Hunter Plus on your belt or pack.

Awesome is the only adjective that even begins to describe our Laredo Bowie®. In fact, it really has to be seen to be appreciated, since mere words just don't do it justice. It features a long, heavy, vacuum heat-treated, VG-1 San Mai III® blade made from laminated stainless steel, which is flat ground to produce incredible cutting power and perfect balance. And, as an added bonus, it is given an absolutely ferocious cutting edge that terminates in a dagger sharp point.

To further enhance its versatility and efficiency as a weapon, it sports a four and a half inch long sharpened clip point that helps facilitate the deadly back cut, as well as a wide variety of more conventional cuts and stabbing attacks.

The rich, polished black Micarta handle is as tough as it is beautiful. It is specially contoured to fit the hand like a glove and to provide a positive grip when cutting, chopping or thrusting.

To complement the Laredo's incredibly sharp blade and superb handle, we have carefully forged a unique guard and integral bolster out of a single piece of brass. Both bolster and guard are handsomely detailed and are finished with a fine mirror polish.

To keep your Laredo Bowie® safe and ready for action, we have provided a traditionally styled black leather scabbard that features heavy stitching, brass rivets, thick leather, and a convenient brass belt peg so you can safely slip the sheath under your belt.

WEIGHT: 17.5 oz.  
THICK: 5/16"

The Trail Master® is the most knife for the money ever commercially built! In terms of sharpness, edge holding and strength, it will out perform, by a wide margin, any factory made knife we know of and 99% of all hand forged knives as well!

The broad clip point of the blade is extremely resistant to bending or breaking because it is slightly wider and considerably thicker than most Bowie knives on the market. It is, however, very sharp and offers phenomenal penetration. Additionally, the blade back is equipped with a slightly concave false edge that measures approximately three and a half inches long.

The edge has been honed by hand, then given a high speed buff until it is truly razor sharp and finished with a beautiful rolled edge.

The Trail Master® balances approximately 3/4" in front of the guard for a slightly blade-heavy feel that's ideal for heavy chopping and slashing strokes.

The Kraton® handle is 5" long and deeply checkered for a non-slip, shock absorbing grip. And, its contoured cross section helps prevent the knife from shifting or turning in the hand when striking full power blows.

The double guard is very sturdy and rigidly fixed into place. It is long enough to keep fingers off the blade, yet short enough to avoid being tangled in clothing or equipment when the Trail Master® is drawn.

## GURKHA KUKRI IN VG-1 SAN MAI III®

The Kukri, with its markedly downward curved blade, has long been identified with the Gurkha Warriors of Nepal, ferocious mercenaries who have who have wielded this blade for over 150 years in the service of the British Empire.

The Cold Steel Gurkha Kukri was inspired by Cold Steel President, Lynn C. Thompson's close association with Dr. Maung Gyi, chief instructor of the American Bando Association, and a renowned martial artist with wide-ranging knowledge and skills. Under Dr. Gyi's tutelage, Lynn gained insight into the full potential of the Kukri and learned it was not just a chopping weapon but a piercing, slashing, and smashing weapon as well. Smashing techniques allow the Kukri to function as a hammer or mallet or to deliver non-lethal blows in a self-defense role. A concentrated blow with the back of the blade can break bones or be lethal if directed at the head.

With Dr. Gyi's input, Thompson designed a longer, narrower point for the Gurkha Kukri with more distal tapering to the spine. This resulted in a thinner, sharper point which can be deeply driven into thick, tough targets with minimal effort.

Finally a masterfully designed Kraton handle was added to maximize the blade's fierce potential. Perfectly contoured and deeply checkered, it offers a superb non-slip grip and cushions the hand from the shock of the hardest blow.

The Gurkha Kukri's VG-1 San Mai III® blade will out-chop any factory or handmade knives, including swords twice its size, even expensive, hand forged Japanese Katanas. It's among the heaviest Kukris on the market. The blade is almost an inch wider near the tip than at the handle, shifting the knife's balance point forward to allow a substantial blow to be struck with minimal effort, using inertia alone to complete the cut.

The Gurkha Kukri comes with a Secure-Ex sheath to protect the blade so you can wear it safely and securely at your side, always ready to defend you and your loved ones.

NATCHEZ BOWIE

## NATCHEZ BOWIE

"Under-The Hill" was the notoriously rowdy riverfront district of Natchez, Mississippi at the beginning of the nineteenth century. So disreputable, it was seldom mentioned in the polite drawing rooms of the antebellum mansions that dotted the other side of town during the era when cotton was king.

Our Natchez Bowie was born "Under-The-Hill" and takes its pedigree from those seedy taverns and dimly lit streets. Line-bred for battle, it's the definitive fighting Bowie. Its long blade is perfectly shaped for strength, reach and leverage, and its significant heft is flawlessly balanced, giving it unparalleled liveliness and velocity. Combine all that with its wickedly razor sharp edge and you have a knife that pierces like a dagger, cuts like a razor and chops like a cleaver.

The very best in materials and workmanship is what makes performance like this possible. The blade is made of vacuum heat-treated VG-1 San Mai III® laminated stainless steel. It's costly and difficult to fashion, but the resulting blade is virtually indestructible. The handle also plays a big role in the overall performance. It has a double quillion guard, bolster, and pommel made of highly polished 300 series stainless steel and a gorgeous black linen Micarta handle. It will easily accommodate a wide variety of gripping methods while serving as a very formidable impact weapon as well.

To compliment the Natchez Bowie and to further cement its position as the quintessential fighting Bowie, it comes with a traditional black leather scabbard. Made of the finest leather, it's beautifully stitched and reinforced with nickel-silver rivets. It also features a thick nickel-silver belt peg so you can slip it in your waistband or under your belt without fear of losing it.

## PENDLETON CUSTOM CLASSIC

Whether you're hunting the Big Five in Africa, Elk in Colorado, Moose and Bears in Alaska, or Whitetail deer in the North Forty, there aren't many things that will enhance your hunting experience more than carrying and using this superb custom-quality hunting knife.

Our Pendleton Custom Classic is a handsome reproduction of Lloyd Pendleton's Drop Point Hunter. It has a 3 1/2" blade with a sharp yet sturdy point for piercing and a truly razor sharp edge with plenty of belly. Its hand crafted polished blade is hollow ground from 5 mm thick VG-1 San Mai III® stainless steel and boasts state of the art vacuum heat treatment, a sub zero quench and multiple tempering. With its tapered full tang construction and extra stout "spine" it's virtually indestructible and, in a pinch, can double as a life saving survival knife.

Lloyd's guard and integral bolster have been exactly duplicated. Precision machined from stainless steel and skillfully polished, it features a single short quillion and a unique "thumb print" on the bolster to help protect the fingers and allow any number of grip options. The handle is also a faithful copy of Lloyd's original. Featuring a red fiber liner that accents the tapered tang, and twin contoured handle scales made of highly polished black linen micarta with six stainless retaining pins.

A heavy pouch-style sheath is included with the Pendleton Custom Classic. It's made from brown cowhide with a thick welt and sturdy stitching and is wet molded to fit each knife. It covers two thirds of the handle so your knife is held secure and won't "pop out" inadvertently.

## PENDLETON HUNTERS

If you prefer a smaller, more inconspicuous hunting knife, but are reluctant to give up the performance advantages of a larger blade, your search is over.

Our Pendleton Hunter, which was produced in collaboration with custom knife maker, Lloyd Pendleton, has a 3 1/2" blade that is so sharp and efficient you'll almost think you're using a larger blade. Lloyd's unique drop point design makes field dressing and skinning chores a snap. The combination of a thick spine for strength, and a deep, wide hollow grind results in a sharp point that's ideal for piercing and the thin, razor sharp edge lasts and lasts yet remains easy to re-sharpen.

The handle of the Pendleton Hunter also reflects Lloyd's genius. Carefully contoured to fit the hand and sporting a modest guard and thumb stop, it facilitates a variety of grip positions. For durability, it is made of shock absorbing, deeply checkered Kraton® which is impervious to the elements and provides an ideal gripping surface even when hands are wet or bloody.

To house the Lloyd Pendleton Hunter's razor sharp blade, it comes with a superb Secure-Ex® sheath, which, like its handle, is impervious to adverse weather conditions and far more puncture or cut resistant than a leather sheath.

**MINI HUNTER:** Imagine an awesome hunting knife pared down to the smallest size practicality allows, and you'll have some notion of what the Pendleton Mini Hunter is all about. You might use the rationale that this small, yet handy, knife is incapable of performing big cutting jobs, but you'd be mistaken. We've field tested this little dynamo on three continents to dress and skin a wide range of game from rabbits to animals the size of elk. Made from the same materials and with the same attention to detail as its larger counterpart, it's an indispensable tool for tucking into a fanny pack, ruck-sack, or general survival kit. Housed in its Secure-Ex® sheath, it's ready to serve and light enough to be carried 24 hours a day.

## ULTIMATE HUNTER

Have you ever imagined a hunting knife that has the safety and convenience of a folding knife, yet has the strength and cutting power of a fixed blade? Cold Steel® has taken this thought one step further and made it a reality with our Ultimate Hunter.® Cold Steel® President, Lynn C. Thompson, a world-renowned hunter in his own right, and custom knife maker, Lloyd Pendleton, have designed a folder that offers everything you could want in a hunting knife.

The blade, featuring Lloyd's famous drop point configuration, is ideal for field dressing and skinning big game animals and is stout enough to withstand considerable abuse without snapping. It's fashioned from 4 millimeter thick VG-1 stainless steel and hollow ground to an unbelievably sharp edge that will last and last yet remain easy to re-sharpen. A deep lustrous satin finish highlights the blade's precision grinding and enhances the Ultimate Hunter's® visual appeal.

The state-of-the-art rocker lock is the result of 18 years of hard won technical skill. No one in the industry makes a stronger lock than Cold Steel.® The precision milled, hand fitted parts and extra thick, stiff springs will provide safety under hard use and the special heat treatment, along with other secret refinements, make this lock a formidably strong and reliable piece of workmanship.

The Ultimate Hunter's® most winning feature is its exceptionally comfortable Thermorun® grip. It's specially contoured to fit the palm, absorbing shocks and sticking to one's hand with the kind of traction only Thermorun® can provide. It can be welded for hours without discomfort or fatigue.

Thumb studs, for one handed opening, are included on both sides of the blade and a custom designed pocket clip means your Ultimate Hunter® will be close at hand and ready for your next hunting or outdoor adventure!

**SRK®**  
(SURVIVAL RESCUE KNIFE)

Survival/Rescue operations demand a versatile knife able to withstand the most extreme abuse. The SRK® (Survival Rescue Knife) was designed specifically with this in mind.

The blade is finished with a rich Teflon® coat which helps to protect the AUS 8A Stainless steel from the elements. It features a tremendously strong clip point that's fine enough for delicate work, yet possesses enough belly for efficient cutting, slashing and skinning strokes as well.

At 3/16 of an inch thick, the Survival Rescue Knife® offers the sturdiest possible point and edge configuration, without sacrificing sharpness. The SRK's® handle sports a single quillion finger guard and a deeply checkered Kraton® grip.

**RECON TANTO**

Over the last 29 years, Cold Steel® has succeeded in establishing the Tanto as a superior combat blade. The value of the Tanto styled reinforced point is now without question. Our superb Japanese Tantos are still unsurpassed for fit and finish, but are expensive, and beyond the financial reach of many knife enthusiasts.

Our Recon Tanto has combined a 7" blade, classic Tanto styling, AUS 8A Stainless steel and a comfortable, western-style Kraton® handle into an affordable package.

The Recon Tanto is rapidly redefining the standard for combat knives around the globe. It is well on its way to becoming the preferred fixed blade for SWAT teams and special military units.

Visit your local dealer and ask about the Recon Tanto. Experience the extraordinary quality and test the distinctive razor sharp edge for yourself and you will see why, as a professional, this is a unique knife you can't afford to be without!

**KITCHEN CLASSICS**

The knives in Kitchen Classics series will race through just about any task you can imagine. These blades are ice tempered and then precision flat ground for maximum cutting power. All models in the series come with a razor sharp edge that lasts and lasts, and some have serrated edges uniquely appropriate to the tasks they were designed to do.

They are made from the same Krupp 4116 Stainless Steel that is used in some of the most expensive German cutlery.

The handles are, in a word, terrific! Carefully designed to ensure a strong, secure, yet comfortable grip, they feature a stiff Zytel® core on the inside, with a softer, deeply checkered Kraton® exterior for the kind of non-slip grip that must be felt to be appreciated!

The Kitchen Classics are available for purchase as single items or as a complete set. The set includes an attractive counter-top oak stand, and one of each [except for the Steak Knife, which comes in a group of 6] of the knives shown here.

## RAM SAFE™ LOCK

The Ram Safe™ Lock's relatively simple construction consists of three main parts: the folded steel frame, the Ram Safe™ locking bar, and the blade. The Ram Lock is simply a steel bar that moves forward and back under spring tension. A strong compression spring drives the Ram forward at all times. This forward action is what keeps the blade closed when folded and locked open when in use. When opened, the Ram wedges itself between the blade tang shelf and the folded steel frame. This lock up is unique in that the Ram, although locking the blade, is not really able to break or shear because it is compressed between the folded frame and the blade tang shelf. In the case of Ram or blade shelf deformation under extreme abuse, the angled Ram is self adjusting always being pushed forward past all deformations, creating a new solid lock up.

## BUSHMAN®

For the money, the Bushman® knives might be the strongest survival/outdoor knives in the world! Unlike most hollow handled survival knives, there is no joint or seam between the blades and handles that requires a mechanical fastener. Instead, the Bushman's® blades and integral handles are each expertly cold forged out of a single piece of 2.5mm thick SK-5 high carbon steel. The resulting knives are expertly heat-treated and tempered to RC54 and, when subjected to our tests, have withstood over two tons of pressure on their blade/handle transition!

Every Bushman® blade has been carefully ground to an extra thin edge, and then honed and buffed by hand until razor sharp. The Bushman® knives are versatile tool! Their hollow handles will accept survival supplies or a variety of handle extensions which can maximize reach, leverage or ease of throwing. They are available in two blade styles (Standard and Bowie point). Both feature continuously curved blades that are ideal for skinning, and will pierce, cut, slash, slice and shear like you won't believe.

Both Bushman knives come complete with our new heavy duty Cordura Survival sheath which features a utilitarian pocket on the front for storing small items.

## POCKET BUSHMAN®

The Bushman® has been a mainstay of the Cold Steel line for more than a decade now. It's an economically simple design, with winning features like strength, versatility, and an affordable price. It's practically perfect! So, rather than upstage the Bushman, we've created a complement to it, a version small enough to carry with you everywhere you go. The Pocket Bushman.

While it's physically impossible for any folding knife to ever match the strength and rigidity of a fixed blade, we believe our Pocket Bushman, with its new patent pending lock, is close to hitting the mark. The blade is long and wide with a short, sharp, clip point for usefulness and versatility. And it's hollow ground from top to bottom with just enough belly to be useful for all sorts of tasks.

For the handle, we used the mono block construction method famously used in the French Douk Douk line of knives. There are several advantages to using the mono block. It's simple to mass-produce, and, since there are no liners, handle scales or back spacers, the end result is quite affordable. A single sheet of stainless steel is folded in half to form a housing for the closed blade, as well as supplying the enormous strength and rigidity required to compliment our Ram Safe™ lock.

Andrew Demko designed the Ram Safe™ lock to work in tandem with the mono block handle. It features a unique, self adjusting ram that moves forward as the knife is opened and wedges itself tightly between the tang cut away we call the "shelf" and the "U" shaped "roof" of the handle. It's powered by a strong compression spring that urges the ram forward and makes for an incredibly strong lock up. Positive pressure on the lock generated by heavy cutting or chopping strokes is distributed through the blade, then the blade tang shoulder and finally directly into the mono block handle that acts like a giant unbreakable stop pin. Negative pressure from sticking, digging or prying with the point is directed in a different direction through the blade to the blade tang shelf and then to the ram which is squeezed between the shelf and the "U" shaped roof of the handle. Negative pressure easily defeats the vast majority of lock mechanisms. The only way the Ram Safe™ lock can be overcome is if the blade breaks or if the pivot pin is sheared off. Two situations that are highly improbable.

## OSS & OSI

The OSS and the OSI sub hilt tactical knives offer all the advantages and performance of a custom knife with the additional advantage of being low in cost. The blades are made of Japanese AUS 8A stainless steel, and are given a state of the art heat treatment that includes double tempering, assuring that they're unsurpassed in strength and toughness.

The grip on these blades is a model of efficiency and economy. The handle, guard and sub hilt are injection molded in one integral piece out of Kraton. This reduces cost, yet delivers the durability, security, and control a sub hilt is famous for. And, as an added bonus, renders the handle impervious to moisture or inclement weather.

The OSS, double edge model, is primarily best suited to a thrusting attack, however, because its twin edges are honed razor sharp, it's capable of delivering a lightning quick slash in virtually any direction.

The OSI is the single edged version of our OSS. Hollow ground to a thin, ultra keen edge it's an awesome "sticker" and will cut and slash with the best of them. Extensively field tested by our President, Lynn C. Thompson, in Australia in 2007-08, it has field dressed, skinned, and "broken up" dozens and dozens of animals from wild boar to buffalo and proved to be outstandingly efficient field knife. It's also ideal for use in countries or localities that prohibit or restrict double edged knives.

## BOAR HUNTER

Nothing's more primal than hunting wild boar with nothing more than a knife. It's the element of hazard that makes it a worthwhile experience. One catch dog falters, or loses his grip and you're at the mercy of some sharp, angry tusks.

If you're quick and skillful with a good knife like our new Boar Hunter, you might avoid this dangerous scenario.

The Boar Hunter comes with an extra wide Celtic style blade, a long sloping point and a superbly hollow ground edge. It supplies the decisive piercing power you'll need to drop the biggest, meanest boar. Your hand won't slip up on the blade either, because the handle (borrowed from our OSS) has an integral double guard and sub-hilt!

Complete with an ambidextrous Secure-Ex® sheath that will accommodate just about any belt, the Boar Hunter is a lightweight, life safer you'll want at your side on your next hunt.

## TAI PAN®

Like its serpent namesake, the Tai Pan® is aggressively fast and deadly. Designed by Lynn C. Thompson in the distinctive "Tanto" style, the Tai Pan® embodies all the best features of a classic dagger while minimizing its shortcomings.

Most daggers are notorious for having thin, fragile points that are easily broken. In contrast, the Tai Pan® features a sturdy spear point which is wide and thick enough to resist breaking without compromising its ability to offer deep, effortless penetration.

The razor sharp twin edges offer twice the potential cuts, slashes, and locks of a single edge knife. When used with skill, the Tai Pan® can cut a 180° arc up or down or from side to side with devastating effect. With a balance point just behind the guard, the Tai Pan® has subtle "handle heavy" feel making it ideal for insertions yet remaining "lively" in the hand.

As with the Tanto, the Tai Pan® features a tapered black Kraton® handle with a unique flattened oval cross section. Over time, this material and handle shape have proven ideal for preventing the knife from shifting or turning in the hand even under the worst circumstances.

Meticulously fashioned from 300 series stainless steel, the traditional style tsuba and bolster offer both added safety and beauty. The Tai Pan's® butt terminates in a tapered, semi-pointedommel to maximize the effect of even the slightest blow.

TAI PAN®

## KOBUN®

The Kobun® is a lightweight Tanto styled boot knife. It takes its namesake from the Japanese martial, or underworld where the word "Kobun" means "soldier". It's a fitting name for a knife like the Kobun®, which was effectively designed to be "a good soldier".

In profile it closely resembles our Master Tanto, but it sports a thinner blade, and that supports its main function; to be a light weight boot knife.

Like our Tantos, it features the Tanto styled reinforced point. This contrasts sharply with most boot knives on the market today which are notorious for their paper thin points which are easily broken or bent. In contrast, the Kobun's® point is highly resistant to bending or breaking because it is reinforced by the full thickness of the blade's spine which runs almost to the very tip of the blade.

The Kobun's® deeply checkered Kraton® handle is designed to offer minimum bulk with maximum grip. Its cross section was made as thin as possible (approximately 1/2 inch), then contoured to resist turning or shifting in the hand.

The Kobun® comes complete with a Secure-Ex™ sheath.

## TANTO SERIES

There isn't a person working in the knife industry today that knows more about the Tanto than Cold Steel does. It was, after all, Cold Steel who invented and popularized this knife style in the early 1980's. We have spent well over a million dollars persuading the public, both through advertising and live or videotaped demonstrations, of the Tanto's many advantages. We have been producing Tanto's for more than 25 years now, and there is still no factory or custom knife maker around making a Tanto that can approach the cutting, slashing or piercing power of one that is manufactured by Cold Steel.

All of our Tantos feature a deep lustrous satin finish on the hollow ground blade bevels and a contrasting line grain finish on the blade flats. This technique highlights our state of the art grinding methods and emphasizes the Cold Steel Tanto's unique appearance. In addition, the Tantos come with our famous flattened oval Kraton® handle. The oval shape provides a solid grip and resists rolling or twisting in the hand under hard use, the kind that, over time, would destroy a lesser knife. The use of Kraton® in knife handles is another Cold Steel innovation. Kraton® is an unparalleled space age material that won't crack or rot and is immune to the ravages of bad weather.

The tapered, solid steelommel is another important Tanto feature that should not be ignored. Lynn Thompson designed it to concentrate the full force of a crushing blow in a small area so that even a moderately powerful blow can be remarkably effective in disarming or otherwise incapacitating an attacker.

The knives in the Tanto Series all come with a thick, high quality black leather sheath that is sure to give years of hard service and keep your Tanto at your side, ready for action.

### MASTER TANTO:

This knife features a six inch VG-1 San Mai III® blade with a re-styled guard for increased finger protection.

### MAGNUM TANTO II:

Two ounces heavier than the Master Tanto, providing a 30% increase in cutting power. Combine that with the visual impact of a tsuba-style (sword) guard and you have perhaps the ideal Tanto. The Magnum Tanto II's blade is made from VG-1 San Mai III.®

### MAGNUM TANTO IX & XII:

These were created in response to popular demand for a longer Tanto. They are available in 9 inch and 12 inch blade lengths in our VG-1 San Mai III® laminated steel.

## EMPEROR SERIES

Our factory has used only traditional materials for our Japanese sword's fittings. The Tsuba (guard), Fuchi (collar), and Kashira (pommel), are expertly made and finely crafted in nickel-silver brass.

The Habaki (blade collar) is hand made out of nickel-silver brass and each hilt is covered in Samé (ray skin) and tightly wrapped in the traditional style with black silk cord. A beautiful Menuki (a small ornamental sculpture inserted between the ray skin and the cord wrappings on the handle) enhances the sword's aesthetic appearance and makes for a sword that is as traditional looking as we can possibly make it.

All feature fully sharpened 1055 carbon steel blades, each heat treated to a spring temper. The blade surface is then given a careful polish by hand, with a distinctive mirror polish applied to the fuller (blood groove).

## DRAGONFLY SERIES

The classic Japanese battle sword in all its incarnations has been celebrated for centuries, not only for its elegant lines and simple beauty, but also for the technique and skill that went into its construction.

Most swords offered today are interpretive copies of antiquities from feudal Japan. They were made for warrior's of small stature who seldom rose above five and a half feet. As skillfully designed as these swords are, they may not be perfectly suited for the twenty first century warrior, who benefited from contemporary advances in childhood nutrition and healthcare and grew up to be a substantially taller, stronger, and more athletic version of his historical counterpart.

As a way of compensating for this size disparity, Cold Steel has created the Dragonfly Series. These swords feature thicker, wider and heavier blades, which mirror our Emperor Series in respect to heat treatment, polish, quality of furnishings, and attention to detail, but with a few new departures.

Most noticeable are the distinctive teal-green silk cord-wrap and black samé (ray skin) used on the handles and the black iron furniture that bears the dragonfly motif. Also, the polished blades are more strongly curved than our Emperor blades and terminate in a long "iris leaf" point for maximum cutting and slashing potential. Additionally, these swords come with two protective bags. There is a blue cotton travel bag and an intricately decorative display bag that's made from the finest heavy silk brocade.

## WARRIOR SERIES JAPANESE STYLED SWORDS

The Japanese swords of the Emperor Series have proven, since their initial introduction almost six years ago, to be quite popular with many of our customers. Still, we are aware that there are some people who want a battle ready sword but hope to find one at a more affordable price. Our Warrior Series addresses this problem directly. In our efforts to reduce the costliness of the blades, we have omitted the expensive mirror polishing that we used on the Emperor swords to create a series of Japanese swords with a more practical finish.

The Warrior Series swords are very handsome in their own right and share the same steel, heat treatment, and sharpness as their more expensive Emperor counterparts. Like the Emperor swords, they have Samé covered, cord wrapped handles and quality fittings. If you're in the market for a strong, good looking, reasonably priced Japanese sword we know you'll be happy to own one of these.

## BUTTERFLY SWORDS

Prior to World War II, the Butterfly Sword was virtually unknown outside of southern China. This changed at the close of the 1940's, when the Communists took control of mainland China, forcing many Kung Fu masters to flee the oppressive regime and establish new schools

elsewhere. Currently, due to the spread of Kung Fu, these once obscure swords have become quite popular.

Typically, Butterfly Swords come in pairs that are cleverly nested together so they appear to be one sword not two. When they are drawn, they can be quickly separated and wielded in both hands to make wickedly effective chops, slashes and thrusts.

Our battle worthy blades are 15" long

and 2 5/8" wide. The handsome slip-proof grip features carefully selected hardwood covered with attractively braided cord. The "D" shaped guard has a long forward quillion, so it can both deflect and trap various opposing weapons.

#88BF  
BUTTERFLY SWORDS

## CHINESE WAR SWORD

There are few swords in the world that are more intimidating or more effective than the two handed Chinese War Sword. For centuries it has been wielded by both peasants and soldiers alike with devastating results. Its huge wide blade will shear through armor as if it

were butter, not to mention mere flesh and bone. There is nothing clumsy or awkward about this sword. Its 14 1/2" cord wrapped grip, "S" shaped guard, and steel ring shaped pommel all work in concert to make it a well balanced weapon that's unbelievably fast and agile.

It comes fully sharpened and is protected by a stunning, heavy leather scabbard of exceptional workmanship. Order your sword with confidence as we are convinced you will be more than delighted with the sword's fit, finish, materials, and above all, performance!

## GIM SWORD

There are two basic types of straight bladed swords used in China. One is fairly long and heavy known as the Wu Jian or "Martial Sword". The other is substantially lighter and called a Wen Jian or "Scholar's Sword" and was primarily carried for personal self defense.

After studying books and video tapes on the history and use of both weapons, we decided to make

our own battle worthy Gim (Wu Jian) for serious collectors and practitioners of Chinese Martial Arts.

The blade of our Gim is made out of 1055 carbon steel and measures 30" long by 1 1/4" wide. For cutting and slashing, both edges are quite sharp and they terminate in a strong, useful point of stabbing. The traditionally styled guard and pommel are cast out of thick sturdy brass and fit snugly on a

stout Rosewood handle that is both highly decorative as well as functional. The Gim Sword comes with an excellent wood scabbard with brass throat, chape and sword rings, so that it can be worn suspended from the belt or slung over the shoulder.

#88CWS  
CHINESE WAR  
SWORD

## SWORD BREAKER

The ancient Chinese Sword Breaker had a rectangular (occasionally hollow ground) cross section with sharp corners making it possible for it to focus a blow with maximum impact. Such a blow could, at the very least, beat an opponent's blade aside or so far "out of line" that recovery in time to mount a defense was virtually impossible. At the most, it could live up to its name and could break, bend or disable conventional swords and many other weapons with a single blow! In either scenario, one is left powerless to avoid the Sword Breaker's imposingly ferocious point. Luckily,

there were few who encountered this powerhouse in battle, as its girth and heft meant it required a warrior of substantial strength and agility to wield it properly. But, in the hands of a physically able, and skilled warrior, it was the scourge of hand-to-hand combat.

We at Cold Steel drew inspiration for our design from an original antique Sword Breaker we were privileged to handle and study in China. Our handle is made of heavy, dense Rosewood with a fluted cross section that affords a good grip. It features beautifully cast nickel-silver fittings throughout, from the decoratively detailed circular guard to the very stout 5 lobbed pom-

mel that effectively counter balances the weight of the blade and makes it easier to wield.

Thirty inches long and beautifully forged out of 1050 high carbon steel, our Sword Breaker has a striking rectangular cross section and hollow ground "flats", and comes complete with a Rosewood scabbard that features nickel-silver furniture to match the grip. It's built for the extremes of a smashing, hammering fighting style, with a point that is acute enough to pierce with little effort, yet tough enough to perforate even the thickest metal armor. It's a bona fide wrecking machine!

#88G  
GIM SWORD

## JADE LION SWORDS:

The concept of the guardian lion emerged in China over 1800 years ago during the Han Dynasty. The lion, fierce, courageous, loyal and swift, was the perfect symbol to guard home and hearth. Both decorative and symbolic, it was common to see elegant sculptures of these lions guarding the homes of the wealthy and aristocratic or even the gates of the Imperial Palace and the tombs of the Chinese Emperors.

Our Jade Lion series draws upon the same protective reputation, combining ceremonial, "dress" styling with "battle ready" performance. This makes them appropriate for collectors specifically as well as martial artists in general.

The watchful Chinese lion motif is cast in nickel-silver with almost sculptural detail on the heavy guard and pommels. This provides a compelling contrast to the elegant jade green color of the cord wrapped handles and matching rosewood scabbards that are covered in highly polished samé (ray skin) that's dyed to match the handles.

The most attention grabbing feature, however, are the blades themselves. Forged by hand and expertly tempered from our finest Damascus steel, their distinctively subtle swirl pattern bespeaks the elegant beauty of fine craftsmanship combined with the incomparable strength of Damascus.

**JADE LION GIM:** The Lion Gim is a civilian self-defense Wen Jian (Scholar's Sword), with a little more panache than the practical versions (like our own Gim Sword) that were made for the battlefield. In our tests it severed and pierced 4" bamboo poles with a single cut or thrust.

**JADE LION DAGGER:** A perfectly scaled down version of the Gim, it shares the same design, materials and exquisite craftsmanship of its larger counterpart. It's perfectly balanced, big and strong enough to stand on its own or fight alongside its bigger brother.

## ITALIAN LONG SWORD

The era of the long sword spanned almost three centuries (approximately 1350 to 1650). This, undoubtedly, was because it really worked! It featured a distinctive cruciform hilt and a long, double edged blade and was equally adept at opposing both light and heavily armored foes. You see, its extra long blade offered the reach and leverage for powerful stabbing, cutting and chopping strokes while its long cross guard and heavy pommel were useful for hooking, striking and smashing. When heavy plate armor was encountered, blows with the edge were marginally effective and were often abandoned in favor of a "Half-Swording" technique; where one hand grips the hilt and the other the blade to better direct the point in powerful jabs, and to more accurately thrust at the small gaps and joints present in a suit of armor.

Having read S.M. Sterling's "Change" series of science fiction novels about a world that loses 600 years of technological evolution overnight (an event called "The Change") at least a dozen times each, has left our President Lynn C. Thompson quite taken with the many virtues of the Long Sword and inspired him to make a Cold Steel variation.

Modeled on the Italian concept of sword design, the blade and balance slightly favors thrusting attacks, however, its cutting edges are astonishingly effective too and can deliver some down right ferocious blows. Additionally, its simple cruciform hilt is also all business with a long upturned cross guard, leather-over-wood grip, and a counter balancing fish tail pommel. Fast as a frog's tongue the Italian Sword is deadly in a fight and built like a tank.

### ITALIAN LONG SWORD DAGGER

Since our Italian Long Sword is light and well balanced enough to use in one hand we thought we'd offer a companion dagger to take the place of a shield, targe, or buckler. Scaled down in size but almost identical in appearance, its sharply tapered, double edged blade slightly favors attacks with the point over the edge and is stiff and strong enough to parry any sword.

## VIKING SWORD

The Viking sword of the 9th and 10th centuries featured a long wide blade with a broad central fuller and two keen edges. The preferred stroke was a hard slash or chopping blow, so the point was fairly rounded yet acute enough to be useful for thrusting. A simple guard with forward curving quillions was often utilized and combined with a utilitarian wooden handle that was covered with leather, bone, or even cast in brass.

But, what really made the Viking Sword so distinctively recognizable from its contemporaries was its heavy 5 lobed pommel used to balance the long blade.

Our sword has features in common with its historical counterpart. It has a double edged blade, hand forged out of Carbon steel and then polished to a brilliant lustre. The wooden handle is covered in leather and is supported by a simple, elegant guard at one end and a 5 lobed pommel at the other. Both guard and pommel feature Celtic knot embellishments.

To house the keen double edge blade, the Viking Sword comes with a wood scabbard covered in black leather and reinforced with a highly polished steel chape and throat.

## NORMAN SWORD

The Norman lust for battle and ravenous desire for land and treasure can, like their famous sword be undoubtedly traced to their Viking forefathers who wrenched their homeland in northwestern France from the hands of Charles the Simple in the Treaty of Saint-Clair-sur-Epte in 911 AD.

Never satisfied with thier lot, it wasn't long before they once again took up their broad, double-edged swords and set sail across the English Channel to conquer Britian most famously, at the battle of Hastings in 1066 AD.

Now Cold Steel is pleased to offer you our battle ready version of this famous sword. Like the originals we have studied, and the trainers our President Lynn C Thompson spars with, it offers a long wide blade with fully sharpened edges and a very useful point.

To insure it's light enough to be easily wielded with one hand we have also added a single broad fuller in the center of the blade that serves to reduce weight, improve balance and add the stiffness needed to withstand heavy blows.

The hilt of our Norman Sword is also reminiscent of many surviving originals with upturned, spatulated quillions, leather-over-wood grip, and a modified "cocked hat" pommel. This pommel shape was specially chosen because it allows more room for the hand, while counter balancing the blade and serving as a weapon in its own right.

## HAND AND A HALF SWORD & DAGGER SET

We would be hard pressed to think of a more versatile or effective sword than the "Bastard" or "Hand-and-a-Half Sword" we offer here. For a sword of this size, it's amazingly light and fast and tips the scales at approximately 3 lbs. Its 33 1/2" long blade is quite wide so it can produce deep shearing type cuts yet pointed enough to be effective in a thrusting attack. Its long handle is suitable for both a one or two handed grip and is fashioned out of wood covered in black leather. To balance the long blade we have capped the butt with a beautiful "scent stopper" pommel which can be a lethal weapon in its own right.

A companion dagger is also available. Scaled down in size and almost identical in appearance, it offers a 13" long blade designed to cut and thrust, yet be sturdy enough to stand in for a buckler in defensive roles.

Every Hand-and-a-Half Sword and companion dagger reflects the highest standards in workmanship and materials and comes fully sharpened and ready for battle. To safely house their keen blades we have also included very attractive scabbards made of wood covered with black leather with a steel throat and chape.

## TWO HANDED GREAT SWORD

Our Two Handed Great Sword is one of the biggest swords we make. But don't let its size fool you, as there is nothing awkward or clumsy about this awesome sword. Sure it's big and meant to be carried over the shoulder in its scabbard, but it's extremely well balanced and easily wielded by people of larger stature and physical strength.

To protect the hands from opposing weapons, it features a large guard with side rings plus integral parrying hooks that allow the blade to be shortened for close range slashing and stabbing attacks.

The handle is made of wood and covered with leather and is extra long to afford a full two handed grip. What's more, it's capped by a heavy steel pommel that helps counter balance its long blade and serves as an effective weapon in its own right.

The Two Handed Great Sword is sturdy, strong and battle ready. If you're looking for the ultimate in big performance oriented swords, your search is over.

## GROSSE MESSER

Known throughout Germany as the "Big Knife", the Grosse Messer hails from central and northern Europe where, in far off days of old, noblemen and peasants alike relied on it to protect hearth and home from the ravages of brigands, cut throats, outlaws and other assorted characters of ill repute.

Due to its stout, wide blade and generously sized handle, it could be wielded in one or both hands and was capable of shearing through chain mail or cutting a man in half with a single strike.

Our version of this elegantly simple yet remarkably effective weapon sports a hand forged blade of 1055 carbon steel that's so sharp we have used it to split a telephone book in half, with a single blow!

The guard and heavy pommel are made from blued steel and feature rosewood handle scales riveted to the sword's full tang.

For convenience and safety, the Grosse Messer comes with a strong, handsome scabbard crafted from wood and covered in black leather. It is reinforced with a steel chape and throat that has been blued to match the guard and pommel.

## SCOTTISH BROADSWORD

The traditional weapon of the highland clansman, this sword has sown fear into the hearts of Englishmen for centuries.

Its long, two-edged blade and distinctive basket hilt, if combined with targe and dirk has proven to be more than a match for enemy soldiers on battlefields the world over.

Now Cold Steel® has chosen to make our own replica of this famous weapon. Our double-edged blade is hand forged and beautifully polished with triple fullers. The stout basket hilt is made of blued steel with a wood grip covered in Samé (ray skin) and decoratively wrapped in wire. Each broadsword will pass the stringent British Proof test and comes with a wood and leather scabbard that's complimented by a blued steel chape and throat.

## SCOTTISH DIRK

The Scottish Dirk that most knife enthusiasts are familiar with these days is, more or less, a piece of rubbish—a prop—a costume accessory for stage and screen.

It's declined into a "knife like object" that people hang above their mantles or on the walls of dimly lit, wood-paneled dens.

Our version is a modern replica that harkens back to an earlier form, when the dirk was a functioning tool and weapon. The 13" blade is forged to a hard spring temper from 1055 carbon steel. It's 1 1/2" wide and comes fully sharpened and battle-ready, prepared to hew down any foe.

## SWORD CANES

We have been intrigued with the potential of sword canes ever since Major Morris Wright used one to grievously injure Jim Bowie in their famous fight on the Vidalia Sand Bar so many years ago.

There are few weapons that can be put into action faster than our sword canes. Just give the handle a firm tug and the blade will literally leap into your hand!

### STAINLESS HEAD SWORD CANE

This elegant sword cane is similar in appearance to our City Stick (see page 83) and comes with a removable 300 series stainless steel head so that it can be engraved and personalized if you so desire. It features a fiberglass carbon fiber composite shaft that's virtually unbreakable and can be used as a weak hand parrying tool or an emergency bludgeon.

The blade has a tapered square cross section with a wickedly sharp point.

### HEAVY DUTY SWORD CANE WITH AN ALUMINUM SHAFT

Our design concept for the Heavy Sword Cane was to make a cane that offered significant orthopedic support, and be stylish enough so that it didn't look like a stodgy piece of medical equipment.

The result is a very appealing cane with an extra strong partial crook handle made from heavy duty nylon, with a black, aluminum shaft that's 2mm thick and heat-treated for strength. The shaft is handsomely tapered and capped with a thick rubber ferrule for better traction on slick, icy sidewalks or uneven terrain.

The concealed sword is easily released by a hard, quick tug on the handle to break the suction of its friction lock. It's an extremely formidable sword too, made from 1055 Carbon steel, a little over 24" in length and 5.5mm thick. It's sturdy enough for both cutting and thrusting, with one long cutting edge, a strong sharp point, and a fully sharpened back edge. It's more than enough to take down any attacker, and the heavy aluminum shaft of your cane makes a fine weak hand parrying weapon and a frightfully effective bludgeon in its own right.

## SMALL SWORD

The advantage of the sword point over the edge became evident by the end of the 16th century. The Rapier, with its long elegantly thin profile, which emphasized its point, became the popular choice in civilian self-defense. It was, however, an unwieldy weapon, especially when it was used in narrow, crowded streets and alleyways. Eventually, by the end of the 17th century, a more sophisticated, shorter and lighter version of the Rapier emerged, the Small Sword.

Its primary advantage was its stiff, lightweight blade which was forged in a triangular cross section. The hilt (compared to the Rapier's) was simple and smartly functional, consisting of no more than an elliptical plate, or two shells and a knuckle guard.

Our version duplicates the original model's best features, but uses modern materials like 1055 carbon steel, heat treated to a tough spring temper.

The hilt features two shells with functional finger loops and a light, but exceptionally strong, knuckle guard.

The Small Sword comes with an attractive leather scabbard that features an intricately decorated throat and chape.

## RIBBED SHELL SWEPT HILT RAPIER

According to most historians the Rapier first appeared on the sword scene in the late 14th century and held sway in most of Europe until the late 16th century except in Spain where it endured clear into the 18th century. The reason for its long reign as the civilian weapon of choice for self-defense and dueling can be tied to its two major advantages.

First its long, slim, double edged blade was ideal for delivering point oriented blows at a great distance while still being able to deliver a stinging cut. And secondly, its continually evolving hilt of rings, bars, quillions, shells, and eventually, an intricately chiseled cup offered excellent protection (especially now that the armored gauntlet had been abandoned) and shed, caught or deflected blows at the sword hand and forearm with great aplomb.

Sadly, while never proven ineffective or obsolete, the rapier eventually succumbed to the dictates of fashion and gave way to the emerging small sword.

Happily Cold Steel has chosen to revive the Rapier with our own interpretation designed by Dave Baker. The long, narrow blade is fully sharpened and beautifully polished with a single wide fuller at the forte to assure perfect balance. The hilt also reflects the best in craftsmanship and materials fashioned from stainless steel featuring a classic ribbed shell and multiple bars, quillions and knuckle bow for unparalleled hard protection.

The grip itself is made of wood covered with rich black ray skin and decorative wire and terminates in a heavy ribbed pommel that serves as a counter balance to our Rapier's long blade.

### COMPANION PARRYING DAGGER

Designed to compliment our Ribbed Shell Swept Hilt Rapier, our Parrying Dagger offers a long, double edged blade with a stiff, diamond cross section and is fully sharpened, which makes it ideal for delivering a lethal thrust. In addition to that, it also sports twin, upturned quillions that are expertly angled to catch, trap, and immobilize an opponent's blade. The handle of our dagger is styled to match the correspondingly larger Rapier with its similar wood, ray skin and wire grip, and heavy ribbed pommel.

## COLICHEMARDE AND DAGGER

The Colichemarde emerged on the sword scene in the late 1600's during the decline of the Rapier and the rise of the small sword. Its long suit was its uniquely shaped blade that was extra wide at the forte then stepped down or narrowed for the rest of its length before ending in a wicked point. The advantage of this configuration was it allowed the sword to be used to parry or oppose even the heaviest weapons without breaking, yet remain light and supple enough to take full advantage of its lightning quick point.

Our president Lynn C. Thompson has long been an admirer of the Colichemarde due to its great versatility in attack or defense so we enlisted the aid of our good friend Dave Baker, and made our own modern interpretation.

True to form, our blade mirrors the original design concepts with an extra long and wide forte that abruptly tapers down to an acute and deadly point. The hilt features a decorative, yet highly functional, double shell guard, complete with finger loops and knuckle bow, while the grip is completely wire wrapped and capped with a matching pommel.

Additionally, we have also taken the liberty of creating a matching dagger with a stiff, beautifully ground and polished blade, double quillions, and wire wrapped handle.

## 1917 CUTLASS

In 1917, the U.S. Navy decided to replace its Model 1860 cutlass which had been in continuous service for 57 years, with a new model. Cold Steel's® modern recreation of this classic fighting sword is as authentic as possible. It is virtually an exact copy of an original in the personal collection of Cold Steel President, Lynn C. Thompson. Our 1917 Cutlass features the signature 25" curved blade and a half basket guard that are stamped out of heavy 18-gauge Carbon steel, and both the blade and guard are blued to resist rusting. The handle is made from carefully shaped hardwood, painted brown and secured to the tang by three heavy brass cutler's rivets.

The scabbard is an accurate reproduction of the original and is made of high quality leather and features brass and copper fixtures. It can be worn comfortably at the side on a pistol belt without chafing its owner.

## SHAMSHIR

The Shamshir originated in Persia. Its strongly curved blade was enduringly popular and absolutely ideal for delivering a devastating cutting stroke. And, contrary to popular belief, it was very effective at delivering rising, descending and hooking style thrusts!

Typically, the curved Shamshir blade had a narrow cross section and a sharp point. It had a simple brass or steel crossbar hilt and an equally straightforward handle made from wood or animal horn that terminated in a distinctively bulbous pommel. This pommel was offset slightly to help the hand resist centrifugal force when making a hard cutting stroke.

Our version of this historic saber replicates the original as closely as possible. The only modifications were to substitute a modern Carbon steel for the blade and to use black faux buffalo horn for the handle. Even the scabbard is a close copy of the original. It's made of thick, black leather (so it won't dull the blade) and reinforced by a brass throat and chape, and comes complete with dual suspension rings.

## 1796 LIGHT CAVALRY SABER

This saber was widely used by the British and their Prussian allies under General Blucher in the Battle of Waterloo. The blade's profile was derived from the ferocious Indian Talwar and was reviled by the French who strongly protested its use due to the horribly destructive wounds it inflicted. In fact, this saber was so successful as a cutting weapon that the German Cavalry continued to use it right up to the beginning of the Twentieth century!

If you want a combat quality saber that will pass the British Proof Test and is fully capable of shearing off arms and even legs with a single blow, this is a must have! It comes fully sharpened with your choice of a wood and leather scabbard with steel mounts and fittings, or an all metal scabbard.

## 1830 NAPOLEON SABER

Napoleon's cavalry was the bane of the European battlefield. While his horses were second string, his swords were absolutely first rate. They were manufactured in a state of the art factory dedicated to producing the finest edged weapons of the day.

The medium weight saber we are offering here possesses excellent cutting and slashing capabilities yet still remains useful for a thrust.

In appearance, it very closely resembles the U.S. 1860 Light Cavalry Saber, but in actuality is a far more effective and durable weapon. The moderately curved blade is forged out of 1055 Carbon Steel and features a long, wide fuller and a very sharp, practical point.

The grip is equally well made. It's wrapped in black leather and strongly protected by a stout, brass three bar hilt. The whole package comes with a heavy duty polished steel scabbard with dual rings so it can be easily attached to your baldric or sword belt.

## U.S. 1860 HEAVY CAVALRY SABER

At the outbreak of the American Civil War, there were two types of sabers issued to the Federal Cavalry: "light" and "heavy". The light version was popular, but the heavy model, dubbed the "Old Wrist Breaker" was the one worth owning, as it was a superior weapon. Its 36" blade offered big reach advantages over most sabers, and its substantial weight gave it the leverage to easily crush bones and sever limbs or even a head with a single blow. The brass guard had three bars to protect the hand and the grip was wire bound leather and capped with a sturdy pommel. In its double ringed, steel scabbard, it could be easily attached to a saddle or to a belt.

After examining and handling a number of original 1860 Heavy Cavalry Sabers, we decided to make our own reproduction with a few improvements. Our blade is made from 1055 carbon steel with a hard spring temper and will pass the British Proof Test.

While we heartily approve of our Armed Forces wearing dress swords and sabers, we thought it was a shame that only unsharpened, poorly tempered wall hangers made of weak stainless steel are all that's available.

That's why we decided to make our own truly battle worthy reproductions. They're faithful in every detail to government specifications; they offer highly polished blades, appropriate etching and quality hilts and scabbards.

The only real changes we have made are to drastically improve their performance as weapons by forging them from 1050 Carbon Steel and properly heat treating them to a tough spring temper before sharpening.

In the case of the Marine Corps Officer's Saber, we have changed the hilt to solid mirror polished brass (not easily worn gold plate) and improved the attachment of the tang to the hilt so it could better withstand the rigors of sword to sword combat.

COMBAT CLASSICS  
 IN MAR TEMPERED  
 SK-5 HIGH CARBON

These very popular, time tested knives have been in our line for many years and are ideal for just about any mission. Made out of SK-5 High Carbon Steel, they are precision ground, heat treated and Mar Tempered in our state of the art factory in Taiwan to rival the strength, toughness, and edge retention of our famous Japanese swords. Check out their absolutely superior fit, finish and above all sharpness and then put them to work and we are sure you'll agree they are an incredible bargain.

The Bird & Trout Knife is a modern version of a 100-year old classic, treasured by hunters and fishermen for generations. Its enduring popularity is enhanced by its ultra slim profile, and unique, all steel construction.

The skeletonized handle offers great versatility and freedom of movement. It's perfect for working in tight places or making precise cuts. The ring allows the knife to hang from the little finger when not in use and yet remain instantly available.

For safety and handiness, each knife comes with a Concealex® neck sheath which includes a steel bead chain lanyard.

In South Africa, an inexpensive ring lock folder is sold everywhere. It's a good design, but it's constructed from sub-standard materials, is poorly made, and is horribly overpriced. And yet, millions of these knives are sold there each year. Well, we thought we could do better, in the quality of materials, cutting performance, and in price.

The Cold Steel Kudu, takes some cues from its South African competition, but our version is vastly superior. Ours has a Krupp 4116 Stainless steel flat ground blade, heat treated to Rc 56-57 for better edge holding ability and ease of re-sharpening, and a thin razor sharp edge.

For safety, we have thoroughly tested the locking mechanism and are well satisfied it will hold the blade rigidly open until you decide to close it by pulling up on the ring attached to the back spring.

The handle of the Kudu also reflects our dedication to making an effective and affordable folder. It's made of 43% glass reinforced Zytel®. This material has proven to be extremely strong, and is stiff enough to compliment the blade and spring when locked open. Plus, the gripping surface has a wood grain texture for traction and features an attractive polished steel Kudu horn emblem for a little extra flair!

We think the Kudu represents an unbelievable value. It's ready for anything and makes a wonderful work knife, utility knife, bait knife, or hunting knife.

As its name suggests, our G.I. Tanto is a no-nonsense tactical knife that comes with a legion of practical uses. It may be lean and spare, but it delivers the goods where they count the most! The broad Tanto point blade, integral quillion guard, and Polypropylene handle scales, exemplify a tactical knife stripped down to its bare essentials. It's ground razor sharp out of 1055 carbon steel with a hard spring temper and protected by a black, rust resistant finish so it's ready to take all the abuse you and Mother Nature can dish out.

Heavy, sharp and wonderfully balanced, it's easy to throw by either the blade or handle and it hits with real vigor. In a survival or self-defense situation, it can be quickly and easily converted into a spear or war club. Just remove the handle scales and lash the blade securely to a suitable wooden shaft!

Best of all, it's a great value. Please don't throw away hundreds and hundreds of dollars on similar knives sold by convicted felons and rip off artists posing as elite "military operators". Get the real G.I. Tanto from Cold Steel and get more than your money's worth.

#20SPH

The historical Roach Belly knife was a short blade with a pronounced upswept curve and a sharp point. It was most likely named after the common Roach Fish, which had a similarly round curving belly. It was known in 17th century Britain the American Colonies.

Cold Steel's interpretation of this knife is a nod to the Black Powder Community, which has continued to appreciate the Roach Belly's economy, versatility and effectiveness. It retains the profile of the original but incorporates modern materials for its construction. The hollow ground blade is made of 4116 Krupp Stainless, expertly heat treated to Rc 56-57, and given a fine sharp edge that's easy to maintain. Instead of the traditional wood handle, ours is made of tough Polypropylene, so it's impervious to the elements and won't swell, shrink, rot or crack the way wood does.

The Roach Belly comes with a pouch style black Cordura sheath. The sheath has a generously sized belt loop and also converts readily to being worn as a neck knife.

The Cold Steel Canadian Belt Knife takes inspiration from an old 1950's classic. It has all the features that made the original an award-winning, international favorite plus some modern improvements. Our more contemporary version is made out of 4116 Krupp Stainless steel and hollow ground to a razor edge. It will glide through just about any material because its elliptical profile is very efficient at reducing cutting drag.

The Polypropylene handle is equally efficient, fitting snugly in virtually any hand. It's slightly offset in relation to the blade to keep one's fingers safely out of the way. Light and tough enough to endure hard knocks, it will never break or fall apart in the way a traditional wood handle is prone to do.

This 2-ounce blade comes complete with a pouch style black Cordura sheath. It's light, slim and compact enough to carry on your belt or wear it slung from a cord around your neck day in and day out.

Reflecting the best of its Finnish heritage, the Finn Bear is an extremely affordable version of our popular Sisu™. It's ideal for use in the great outdoors, and makes an efficient utility knife as well!

The 4116 Krupp Stainless blade is hollow ground and given an Rc hardness of 56-57, so it will hold a good edge and is easy to re-sharpen. Its blade shape is practical because of its good sturdy point for piercing and long belly for skinning, cutting and carving. It's big and strong enough to skin a moose, yet thin and delicate enough to slice a tomato or cut up an apple.

The Polypropylene handle is straight with a slightly ribbed texture for traction. Its modified diamond cross section will fit your hand like a glove and accommodate a wide variety of gripping methods.

For safety and convenience, the Finn Bear comes with a deep pouch style Cordura sheath and generously sized belt loop so it can be worn on the waist, slung around the neck or tossed into a duffle bag or tackle box.

Over the years our Pendleton Hunters have become enormously popular, and while we think they are reasonably priced, many have asked us for a more affordable Pendleton that will accommodate just about anyone's budget.

So we got together with Lloyd and designed a new knife we call the Pendleton Lite Hunter. In appearance it strongly resembles the rest of the family with a drop point blade, modest guard, hollowed bolster area and a flared butt to aid retention. The only major changes were the adoption of more affordable 4116 Krupp steel and the use of polypropylene instead of Kraton for the handle.

In our testing it got straight A's in the field as it is equally adept at field dressing and skinning, held a decent edge, was easy to sharpen, and proved to be tough as nails.

If you're looking for a very affordable hunting/utility knife that comes with a good, pouch-style sheath and delivers more than your money's worth in performance and value look no further than the Pendleton Lite.

# INFERNO®

There are many unfortunate people who have endured the terror of a violent assault. The luckier ones that survived these crimes are often changed forever. There remains, long after the incident has passed, a paralyzing loss of confidence, a circumspect mistrust of strangers, and a thorough foreboding about the world in general. In short, they got away with their lives, but are now fearful of everything. It's as if they get victimized twice!

Those who have never suffered a life-threatening assault dread the possibility of it happening to ourselves or our loved ones. The mind numbing idea of being unable or insufficiently prepared to defend one's self is too alarming to consider.

It's unfortunate as well that we cannot always count on assistance from an already overburdened police force. Law enforcement agencies aren't equipped to respond to every call, no matter how desperate, and often by the time they are called it's too late for them to do much more than assess the scene and call an ambulance.

There were over 1,382,000 violent crimes committed in 2008, and with the general loss of economic prosperity we've had recently, that number is surely going to continue to rise. The statistics from the FBI Uniform Crime Reporting Program paint a grim picture of the world we live in today:

On Average...

- One murder occurs every 32 minutes
- One forcible rape happens every 5.9 minutes
- One robbery transpires every 1.18 minutes
- One aggravated assault takes place every 37 seconds

The only answer to this threat of physical violence is a thoughtful plan of self-defense. Since many men and the vast majority of women lack the physical strength and martial skill necessary to repel a violent attack it's important this plan includes some sort of weapon that could be used as an equalizer.

A firearm is the ultimate equalizer, and it's the one that comes first to most people's minds. And it truly is. That is if you're well trained in its proper use, and know fully its limitations as well as its advantages. A person untrained in the use of firearms may think they can just pull their handgun out of their pocket or purse and start blasting away. It's a dangerous kind of confidence. You could get hurt, and you might hurt or kill somebody other than your attacker. So what's the answer? A non-lethal weapon like Inferno® that's instantly available, easy to use and totally effective.

## WHAT IS INFERNO?®

Inferno® is a new pepper canister weapon from Cold Steel that will turn the biggest, meanest, most violent criminal into helpless molten wax at your feet. Unlike other pepper sprays you may have heard about, Inferno® deploys a highly targetable foam that contains 8% Oleoresin Capsicum and 2% black pepper. It dissolves into a liquid on contact (this liquefaction effect is tactically important, since other sprays remain "foamy" -like a pie in the face-and make it possible for your assailant to wipe the foam from his face and chuck it at you). One good shot in the face with Inferno® will dilate the capillaries of the eyes causing temporary blindness. It will induce choking, coughing and nausea and most importantly trigger an immediate and massive sneeze reflex (due to the atomized black pepper particles) that will drag the super hot Habanero chili extract deep into the mucous membranes of the sinus cavities of the nose, throat and lungs causing them to swell up and prevent all but desperate life support breathing. In short Inferno® will melt any attacker(s) into the ground and leave them totally incapacitated for a considerable period of time giving you ample opportunity to escape and summon the police.

## ADVANTAGES OF INFERNO®

1. Highly Targetable – because it's a foam and not a spray or fog, it's easy to hit your target accurately indoors or outdoors with Inferno®. It won't contaminate an entire room. This makes it ideal for use in confined spaces like homes, shops, offices and parking garages.
2. Not Overly Sticky – Many pepper gels on the market are advertised to stick like glue and that is a pretty good description as they adhere so firmly, that it's difficult to clean away the crusty, over sprayed contamination that ends up on furniture, automobiles or on your clothing. In contrast Inferno®, while being extremely effective can be easily cleaned off with ordinary soap and water.
3. Safe – Inferno's® unique formulation will not blister the skin or burn the corneas of the eyes.
4. High Quality – Unlike other brands, Inferno® uses the absolute best HFC134A aerosol propellant, which is the same propellant, used in bronchial inhalers. The force of this propellant never diminishes no matter how much you have already sprayed out of the canister. In contrast, competing brands use Hydrocarbon, which is flammable, less consistent and less powerful. Some use nitrogen, which leaks out of the canister over time and supplies an inconsistent pressure.
5. Non Flammable and Awesomely Effective – Inferno®, as mixed, is non-flammable and while the HFC134A propellant is one of the more expensive alternatives, we use it because it breaks up and atomizes the particles of chili pepper and black pepper 2,000 times finer than other propellants on the market, making Inferno® more effective as a stopping agent, because more material is inhaled and or absorbed by your attacker. This makes Inferno® very effective on people who are intoxicated on drugs or so enraged that they do not feel pain during their violent rampages.

## BIG BORE® BLOWGUNS

The blowgun or blowpipe has a long history that spans the globe. Many authorities believe it was first invented in Malaysia where it migrated through the Malaysian and Indonesian archipelago's finding its way to the Philippines and as far north as Japan. The blowgun, however, was not just a southeastern weapon; it also surfaced in the western hemisphere in the jungles of south and Central America, moving as far north as the southeastern United States.

Blowguns were originally invented to serve as a hunting weapon. They were used to bag small animals and birds, with small stones or hardened clay pellets being used for ammunition. Eventually, most hunters discovered that they could take much larger animals by the use of thin wooden darts that were laced with lethal poisons. The poison was derived from the sap of specially cultivated vines.

Our Big Bore® Blowguns feature large caliber .625 Magnum barrels that make them capable of shooting darts that are 20% faster and three times heavier than our competition. They offer vastly improved killing power compared to smaller, .40 caliber darts.

They are available in 4 foot or 5 foot lengths. And, for extra accuracy and range, we sell a two-foot extension as an accessory. Both of the basic models come with a mouthpiece, rubber ferrule, dart quiver, and 36 darts (12 Stun Darts, 12 Mini Broad Head, 6 Hunting Broad Head, and 6 Bamboo).

Large caliber blowguns like our .625 Magnum® have an effective range out to 20 yards or more. With practice, a skilled user can hit a two-inch circle at amazing distances, delivering a heavy weight dart. That's a payload easily capable of penetrating a half-inch sheet of plywood.

Accuracy and range like this enable an experienced hunter to take small game like doves, quail, squirrels and rabbits in complete silence without danger of over penetration or errant darts striking livestock or humans in the distance.

Shooting a blowgun is great fun. It is an activity that can be enjoyed indoors or out, in sunny or inclement weather. Skill with a blowgun can lead to many inexpensive hunting adventures and stand you in good stead in survival or self-defense situations. Try our Big Bore .625 Magnum® and you'll soon find yourself addicted to the fun of shooting the world's most powerful blowgun!

## 2 PIECE BLOWGUN

In the open field, our Big Bore™ Blowguns are easy to carry. They're relatively light in weight and, because they come with a rubber ferrule, they make an excellent hiking staff. If, on the other hand you need to pack them or strap one to your pack, you might find things getting a little awkward.

The problem of making our blowguns into a practical item that people can pack with the rest of their gear has vexed us at Cold Steel for a while now...but, at last, we have a solution.

We took our popular five-foot gun and re-configured it as a "take-down" model. It has two tubes that are about two and half feet long with threaded joints and a reinforcing coupling tube for strength. It's the equal of the regular five-foot model in terms of stiffness, accuracy and long-range performance, but has the added advantage of being easy to pack and transport.

## PROFESSIONAL .625 BLOWGUNS

While our standard .625 Magnum Blowguns are awesome, we decided to raise the bar even higher with our new Professional .625 models. Available in 4-foot and 5-foot lengths, they come with a target style mouthpiece and a 3mm thick barrel.

Yep! That makes them almost twice as thick, and 45% heavier than our standard model and clinches their title of heaviest, commercially made blowguns in the world.

Don't miss your chance to take advantage of the increase in accuracy offered by their great weight and rigidity. Don't miss out in the increased toughness they offer as an impact tool in a self-defense situation. Buy your Professional .625 Blowgun today!

## FROM OUR NEW DVD...

In this sequence you see a Stun Dart destroying a wine glass.

Here, a Bamboo Dart goes through the center of a Life Saver® Candy.

## STUN DART

Now no critter is safe from being knocked off its feet or perch thanks to our new (patent pending) Stun Dart.

Shot from any of our .625 Magnums it flies straight and flat for incredible distances and hits like a freight train.

#B625SA  
 STUN DART  
 (PACK OF 50)

## MULTI DART

Our wire darts can be fired in multiples of 5, 6, or 7, with a trajectory that resembles a shotgun pattern out to 10 yards or more, landing within a 3" circle. This means you can really increase your chances of taking small game, as now you have a lot more darts transfixing the vital zone of your quarry. Plus, they are super easy to use.

All you have to do is bundle some together and stuff them in the barrel of your .625 blowgun and follow them with a driving cone. Next, take a deep breath, double-check your aim, and FIRE!

#B625SE  
 MULTI DART

 7 DRIVING CONES)

OUR THANKS TO KEITH DEHART FOR HIS DESIGN INFLUENCE AND HELP IN THE CREATION OF THE MULTI DART.

## SJAMBOK

In Africa, the Sjambok (Sham-Bawk) is a cattle prod, a whip, a riding crop and a means of self-protection. Unlike most western style whips, the Sjambok is not plaited from thin leather thongs. Instead, it is carved whole out of very thick Hippopotamus hide. Its considerable reach, lightning speed and devastating impact have built it quite a reputation as a sure defense against deadly snakes. Since the Sjambok is swung like a rod or stick and not cracked like a conventional western style whip, the weight, speed and flexibility of the Sjambok's lash does all the work and little skill is required to wield it effectively.

Today Hippo hide is pretty scarce and not commercially viable, so Cold Steel has decided to make a synthetic version of the classic Sjambok. Featuring a thick, beefy lash, injection molded from polypropylene and equipped with a soft comfortable Kraton handle designed to resemble braided leather, our synthetic Sjambok rivals the look and performance of even the most expensive originals. What's more, since it's made entirely from super tough plastic, it's impervious to the elements and will never break, crack, shrink or mildew like leather is prone to do.

Keep a Sjambok handy in your vehicle. Lay it across the dash, stash it behind the seat or toss it in the bed, trunk or boot. Hang one on the wall near the door of your home, shop, barn, coop or kennel. And don't forget to loop one over your saddle horn every time you go riding, as our Sjambok is sure to be the most useful and effective whip you have ever owned.

**SPECIFICATIONS:**  
#95SLB 54" SJAMBOK  
#95SMB 42" SJAMBOK

**HANDLE:** 10 1/4"  
**DIAMETER AT TIP:** 1/2" LONG  
KRATON® HANDLE WITH EXTRUDED PLASTIC LASH

## SELF DEFENSE WITH THE SJAMBOK

In addition to its use as a cattle prod, whip, and a means of self protection, the African Sjambok is also known as a formidable snake killer. Its considerable reach, lightning speed and devastating impact make child's play of dispatching some of the biggest snakes. And you can imagine how devastatingly effective it is on two legged predators as well. A light blow can raise a serious welt while a heavy stroke can cut through thick clothing as efficiently as a razor, leaving a fearsome yet non-lethal wound.

In this DVD, Lynn Thompson, President of Cold Steel® and Chief Instructor of our training division will teach you how to use the Sjambok to defend yourself and your loved ones.

### SOME OF THE SUBJECTS COVERED...

- Advantages of the Sjambok as a weapon.
- Training equipment and safety.
- Gripping methods.
- Fighting stances.
- Footwork.
- One and two handed striking methods.
- Pommel strikes. • Pushing, pulling, and hooking.
- Encircling, trapping, tripping, and uprooting. • Smashing, choking, and sawing.
- Using footwork to avoid blows. • Defeating disarm attempts.
- Defeating the charge. • Defeating the standing grapple.
- Defending your weapon hand, stop hitting, counter slashing, parrying, and blocking.

## THE FIGHTING SARONG

Ron Balicki will take you through a comprehensive look at the Indonesian and Filipino art of "The Fighting Sarong". To date this art is relatively unknown to the world. Ron has trained in Sarong fighting for over 20 years and is sharing his vast knowledge with you today. You will learn how to use the sarong against an attacker who comes at you with punches, kicks and grappling. Learn what to do if your opponent tries to counter you or grab onto your sarong. Ron will also teach you how to use the sarong to defend yourself against a knife. In this series you will also get a special section taught by Martial Arts legend Guro Dan Inosanto.

DISC ONE:

- Empty Hand vs. Empty Hand
- The Sash Method
- The Double Weave

DISC TWO:

- The Double Weave
- The Single Weave

SPECIAL FEATURES:

- Dan Inosanto teaching the Sarong
- The Sarong vs. The Knife

TWO DISC SET APPROX. 3 3/4 HOURS

"RON BALICKI'S VIDEO ON THE FLEXIBLE WEAPONS OF THE SARONG AND MALONG IS EDUCATIONAL AND INFORMATIVE AS WELL AS ENTERTAINING. IT IS A MUST FOR THE MULTI-DIMENSIONAL MINDED MARTIAL ARTIST OF THIS DECADE. HIS PRESENTATION IS EASY TO FOLLOW AND LEARN AND ANY MARTIAL ARTIST SHOULD REALLY BENEFIT FROM THIS VIDEO REGARDLESS OF STYLE OR SYSTEM."  
— DAN INOSANTO

#VDFB

## RON BALICKI'S FILIPINO BOXING

In this DVD series you will learn the traditional Filipino boxing method using empty hands instead of gloves. Developed during the heyday of bare-knuckle boxing, it has surprised and confounded the traditional "western style" boxer for more than a century. This is because it is not just a fist-oriented art, it teaches you how to use your whole body to subdue or drive off an attacker. These instructional DVD's will take you where no other video boxing training has attempted to go before. Whether you're a novice or experienced fighter, this video series has something of great value for you.

RON WILL TEACH YOU:

- Basic On Guard Stances.
- Footwork Methods and Drills.
- 30 Different Punching Methods, Including Ron's Famous Long Range Uppercut.
- Multiple Kicking, Kneeing and Elbow Techniques.
- Basic to Advanced Defense with Special Emphasis on Attacking and Destroying Incoming Punches and Kicks Using your Fists, Elbows, Knees and Feet. (Worth the price of the series for this instruction alone!).
- Filipino Trapping Hand Drills – Single Hand & Double Hand.
- Multiple Kicking Flow Drills.
- Filipino Wrestling/Submission Grappling – Joint/Lock Combinations.

THREE DISC SET APPROX. 5 1/2 HOURS

## COLD STEEL CHALLENGE COMPLETE DVD SERIES 2004-2007

What is the Cold Steel Challenge? It is a celebration of the warrior lifestyle. It's a place where our friends and customers got together to fight in a controlled, respectful, friendly environment. Where they demonstrated their hard won fighting skills, with knives and swords. There were also throwing events where contestants displayed their skills throwing our spears, shovels, tomahawks, and throwing knives.

We tried to create an event where everyone can come and participate, to see how well they stack up compared to their peers, and to hone their skills.

This three DVD set is a documentary recording of the Cold Steel Challenges from 2004 to 2007. Cold Steel President, Lynn C. Thompson introduces each DVD with a general overview of the proceedings, followed by the up close, and personal view of the events that only a camera can record.

## FIGHTING WITH THE SABER AND CUTLASS

"Fighting with the Saber and Cutlass" is really not for people who are only interested in gaining dexterity in sport fencing or to learn the superficial choreographic techniques used for stage and screen. There are plenty of resources available on the market for learning those skills. This DVD set is designed as a serious, straightforward, and focused course dealing solely with the combative use of the saber and cutlass.

The series begins by illustrating how to properly oppose an opponent who is armed with a weapon that is similar to your own. This is the best way to build the necessary foundation of skills, techniques, and eye-hand coordination that will allow you to oppose a wide spectrum of adversaries who are armed with all kinds of street weapons.

After learning and refining these basic skills you will be ready to progress to the seldom taught subjects of infighting, grappling, and brawling with a saber. There is even a section on how to throw a saber with great effect in a combat situation.

### COVERED TOPICS:

- Gripping Methods.
- Ready Stance or On Guard Position.
- Footwork Methods & Fighting Ranges.
- Seven Primary Cutting Methods.
- Five Primary Thrusting Methods.
- 8 Essential Parries.
- How to Recognize and Create Openings.
- Cut, Thrust, and Parry Drills & Ripostes.
- Strategy, Infighting, Grappling, and Brawling.
- Throwing the Saber or Cutlass.

#VDFSC Two Disc Set APPROX. 6 HOURS

## THE FIGHTING TOMAHAWK

The Tomahawk is a uniquely American invention. It can double as either a highly useful tool or as a ferocious piece of weaponry. It is, in fact, these two attributes that have endeared the Tomahawk to generations of countless Americans. Tomahawks, in many variations, have seen service in every armed conflict in our nation's history.

Unfortunately, up until now, there has been very little formal instruction on how to exploit the versatility of the Tomahawk and take advantage of its full potential as a weapon.

That is why Cold Steel is presenting, The Fighting Tomahawk.

### COVERED TOPICS:

- Advantages as a weapon and customizing your Tomahawk.
- Specialized training; Tomahawks and safety
- Gripping methods & Fighting stances and postures.
- Chopping, cutting, slashing, and hacking.
- Stabbing, slapping, hammering, gouging, and sawing.
- Pushing, pulling, and hooking with your Tomahawk.
- Avoiding blows, stop hitting, counter slashing, blocking, parrying, and using the empty hand.
- Disarm defenses.
- Stopping the charge.
- Strength and agility drills.
- Distance judging drills.
- Identifying an enemy's weakness.
- Creating & exploiting openings or opportunities.
- Fight strategy.
- Sparring drills, and actual sparring.
- Opposing other weapons.

#VDFD Two Disc Set APPROX. 4 1/2 HOURS

## THE FIGHTING MACHETE

Machetes are some of the most common and useful tools in the world. They are used on ranches, farms and orchards or wherever thick brush or dense jungle abound, their long wide blades get the job done.

But the Machete is more than just a tool. In a self defense emergency, it can also double as a big knife, or short sword capable of cutting, slashing, smashing or piercing just about anything in its path. In this instructional DVD series, Lynn Thompson teaches you how to harness the full self defense potential of these versatile blades.

### COVERED TOPICS:

- Advantages and Disadvantages as a Weapon.
- Sharpening & Customizing your Machete.
- How to Grip your Machete, Carry and Conceal it.
- Multiple On-Guard Stances and Common Faults.
- Over 26 Footwork Techniques are Taught!
- Seven Methods of Employing the Point of your Machete – Including Reverse Grip Methods.
- 13 Methods of Employing the Razor Edge of a Machete.
- Hitting, Smashing, and Hammering. Utilizing the Flat of the Blade and Blade Spine.
- Defensive Tactics Utilizing Footwork and Avoidance Patterns.
- 13 Ways to use your Machete to Block or Parry Incoming Attacks.
- Defeating Disarm Attempts.
- Defeating the Charge on Take-Down Attempts.
- Fighting from the Standing Grapple (Clinch).
- How to Create and Identify an Opening in an Opponent's Defense.
- And Much Much More.

#VDFM Three Disc Set Approx. 9 Hours

## NEVER UNARMED

A free man has the inalienable, God given right to defend his person, family, loved ones and property from violent assault, unlawful seizure, confiscation, or trespass.

Since firearms are currently at the top of the force continuum it is essential that a free man possess them in abundance and be skilled in their use or he will not long enjoy his precious freedom. Never Unarmed is a very broad look at an enormously wide subject; the firearms and ammunition you need to own or acquire for recreation, hunting, survival, and self-defense.

Filmed over 2 1/2 years, it's a HUGE undertaking and features Lynn C. Thompson with the gloves off as he discusses the pros and cons of air guns, .22 handguns, .22 rifles, mini revolvers, pocket pistols, service revolvers, service pistols, big bore handguns, single shot handguns, single shot rifles, double rifles, bolt action rifles, pump action rifles, lever action rifles, semi auto rifles, single and double shotguns, pump action shotguns, and semi automatic shotguns.

In format, Never Unarmed will be mostly show and tell, with tactical and training insights from time to time, as well as thought provoking demonstrations regarding the use of cover, concealment, improvised fighting positions, home-made shields and much much more. At times the presentation can become quite graphic as Lynn teaches how to defend yourself against dangerous animals as well as how to neutralize violent human adversaries.

Meant for an international audience, it offers lots of options for those who don't enjoy the freedom, security and access to justice we do in the U.S.A. and are already severely restricted in their ability to keep and bear arms.

Absolutely chock full of non stop action, graphic demonstrations, and exciting feats of speed, accuracy, and fire power, Never Unarmed is guaranteed to blow you away and change the way you look at and think about firearms forever.

## WARRIOR'S EDGE®

I am not enamored with the saying: "If you get in a knife fight, expect to be cut." That saying condemns even a highly skilled knife fighter to be wounded, disfigured, disabled or even killed if ever forced to put his training with a blade to the test. This is why I have spent an enormous amount of time in full contact sparring with my training partners to develop a knife fighting method that allows the properly trained fighter to vanquish his enemy with minimal risk of being cut or stabbed in the process.

I have borrowed heavily from Western Fencing, and Filipino Martial Arts, including Lameco Escrima, Japanese Ken Jitsu, and Western Boxing as well. I have even added techniques and methods that are entirely my own.

The result of this effort is a knife fighting method which stresses the avoidance of close range in favor of long range techniques aided by footwork, rhythm, timing, speed and superior tactics and strategy.

I guarantee that if you study these videos faithfully and practice diligently with a training partner you will gain the skill and ability necessary to give you a huge advantage if ever forced to defend your life or a loved one's with a fighting knife.

— Lynn C. Thompson, Cold Steel President

### DISC 1: VOLUME 1

#### INTRO TO LONG RANGE KNIFE FIGHTING:

- The three ranges of knife fighting.
- The types of knives you may encounter and demos of their cutting and piercing power.
- Concealing a knife.
- Make a Cold Steel® trainer.
- A knife must be strong and sharp.
- How to grip the fighting knife.

### VOLUME 2

#### ON GUARD STANCE & FOOTWORK:

- The clock concept, our basic on guard stance.
- Mistakes in assuming the fighting stance.
- Footwork: This is an absolute "must-have" DVD as there are no knife fighters of any consequence out there who don't possess superior footwork.

### DISC 2: VOLUME 3

#### THRUSTS & SLASHES:

- How to use the point of your fighting knife to execute the rake, speed jab, power stab, and épée thrust as well as elliptical and circular stabbing methods.
- How to use the edge of your knife to slash cut, chop, hack, snap cut and vertical whip.
- The twelve angles of attack.

### VOLUME 4

#### DEFENSE:

- Use defensive footwork & evasion techniques
- How to defend against attacks on your knife hand.
- Parrying, stop hitting, counter slashing and stabbing and blocking with your knife edge.
- Using the empty hand to stop-hit, beat, parry, block, tap, and chop.
- The concept of Mai (judging distance).

### DISC 3: VOLUME 5

#### OFFENSE:

- How to recognize and exploit the 21 common openings or weaknesses in your opponent's defense.
- The five principles in creating openings.
- The 11 pillars of strategy.

### VOLUME 6

#### TRAINING DRILLS & SPARRING:

- How to perform training drills that will develop the skills and attributes you need before proceeding to spar.
- Actual sparring instruction and demonstrations.

LYNN'S SHOOTING TIPS

## DEATH DOWN UNDER

Come on the hunting adventure of a lifetime with world-renowned hunter and martial artist Lynn Thompson, as he travels throughout Australia. On this journey, you'll head into the rugged outback of the Northern Territories where Lynn will put his skills to the test, hunting huge Asian Buffalo.

Asian Buffalo are bigger in body size than the African Cape Buffalo. They have much thicker skin and are notorious for being far tougher and more challenging to kill.

Lynn will then travel from the Northern Territories to Southern Australia to hunt trophy Red Deer and Elk. Additionally, he will be assisting property owners and various government departments throughout Australia to cull Buffalo, Red Deer, Fallow Deer and other pest animals that threaten local crops and livestock.

This video features non-stop action and footage of over thirty days of hunting throughout Australia. You'll see over 100 animals fall to Lynn's trusty rifles.

## HANDGUN HUNTING DOWN UNDER

#VDHH  
APPROXIMATELY 1 3/4 HOURS LONG

Imagine experiencing a hunting trip where you truly didn't know if you'd come back in one piece? Lynn C. Thompson, came close while hunting the "outback" of Australia. One small mistake while trekking through the bush could have easily meant he'd be steam rolled by a 2000 pound Buffalo or get gored by a vicious wild boar. And that's not including other deadly challenges such as, venomous snakes, huge salt-water crocodiles and shark-infested rivers.

Always drawn to a new challenge, Lynn is potentially the first big game hunter in the world to take the Big Five (Elephant, Cape Buffalo, Rhino, Hippo and the Lion) and the Dangerous Seven (the Big Five plus the Leopard and the Crocodile) with an iron sighted handgun. And in this video, you will see his skills put to the test yet again.

Share in this unique hunting experience "Down Under" as he takes on huge Asian Buffalo and wild boar of Australia with his trusty Ruger® .44 Magnum Redhawk® and Super Redhawk® revolvers. In his 30 day hunt throughout the Northern Territories, Lynn will take them all on, armed only with his .44 Magnum revolver and his favorite Hornady® Ammunition.

## TRUE FLIGHT THROWER

There are a bewildering number of throwing knives on the market these days, and it seems that most of them are made out of cheap steel that bends or, in the worse case scenario, stainless steel that breaks. That's why we made the True Flight Thrower.

The Cold Steel® True Flight Thrower beats the competition by a wide margin. For strength, we use 1055 carbon steel and finish it with a black, baked-on protective coat. This makes for a hard, yet resilient blade that will "bounce-back" from any throw. And for added versatility, the True Flight Thrower has a utility edge that will stand-up to your toughest chores. It comes complete with a heavy-duty Cordura sheath.

## SHANGHAI SHADOW

The signature ring on our Shanghai Shadow gives this blade an assortment of advantages. This simple device allows tremendous versatility in handling the knife. It provides a totally secure grip when the index finger is locked in place through the hole. It can be pivoted around the index finger for a quick change from a forward to a reverse grip. And it can be a means of extending your arm's reach by up to 4" when gripped by the ring alone.

But as cool and useful as the ring is it's the broad leaf shaped blade and Polypropylene handle scales that ultimately make impressions. Made from one solid piece of 1055 Carbon steel, with a tough spring temper, the twin hollow ground edges of the Shanghai Shadow make it a superb cutting and thrusting weapon.

It comes fully sharpened and includes a heavy-duty, black Cordura sheath.

## SURE BALANCE THROWER

Definitely in the heavyweight class, our Sure Balance Thrower is just shy of 13 1/2" long and weighs a little over a pound. It'll wreak havoc no matter how it lands! It's designed to resemble a classic thrower from the 1950's and features a narrow, yet robust point that drives deep into a wood target, but is resilient enough to resist bending or breaking. Made of 1055 carbon steel with a black, baked-on protective coat, it casts off rainy and inclement weather like an umbrella and is sure to last for many years.

## PRO BALANCE THROWER

With its substantial heft and dagger like point, our Pro Balance Thrower is made for the professional knife thrower and amateur throwing enthusiast as well. You can throw from either the blade or handle and it will sink into even hard targets with ease. Made out of sturdy 1055 Carbon steel, with a black, weather resistant finish and equipped with replaceable composite handle scales, it's ready to endure all that you can dish out and will last for hundreds of tournaments and shows.

## PERFECT BALANCE THROWER

Our Perfect Balance Thrower takes inspiration from a 1950's classic. Its center of balance is at the midpoint of its overall length. It hits hard and penetrates its target efficiently because of its considerable weight and fully sharpened clip point. The strong 1055 carbon steel construction, black rust resistant finish, and replaceable composite handle scales, make it durable enough for thousands of throws. Plus, it has an additional benefit in that it can also hold its own as a heavy duty survival knife, cleaver or hatchet. Get yours today!

SPECIAL FORCES SHOVEL

## SPECIAL FORCES SHOVEL

The Special Forces Shovel is modeled after the original Soviet Spetsnaz shovel. The Spetsnaz were the Soviet army's most elite unit, renowned for their deadly efficiency. Trained to travel light, the Spetsnaz packed only the bare essentials. This included a unique shovel which had a broad flat blade and 3 sharp versatile edges. Our shovel follows the Soviet design as faithfully as possible with newer improvements in the steel (twice as thick as the original) and heat treatment.

**SPECIFICATIONS:**  
 WEIGHT: 26.6 oz.  
 OVERALL: 50 CM (19.68")  
 THICK: 2MM  
 STEEL: MEDIUM CARBON  
 HANDLE: HARDWOOD

## BAD AXE

Like the Special Forces Shovel, the Bad Axe is made of medium carbon steel, over 2mm thick and fully heat treated for strength. The edges of the Bad Axe have been factory honed to a sharp utility edge that can very easily be brought up to razor sharpness without too much effort. The twin edge design offers double the cutting potential. When one edge begins to dull the other is razor sharp. Plus the axe cuts in either direction. It has all the necessary weight for serious chopping, and for target throwing, it's remarkable! With all its points and cutting surfaces, it will stick in virtually any position.

**SPECIFICATIONS:**

## SURE STRIKE™ THROWING STARS

Everyone likes throwing knives! The simple sport of throwing a knife is fun. And no sound is more satisfying than a thrown knife as it "thunks" and sticks a wooden target. Whether you're skilled at knife throwing or are just starting out, you know there's also no fun in missing the target. One solution is the Shuriken or throwing star. Used for centuries in China and Japan, it consists of no more than a flat piece of steel with 3 or more points. If you throw it overhand like a baseball, side arm, underarm or back hand like a flying saucer, it hits on at least one point every time. Our Sure Strikes aren't like the cheap, shoddy throwing stars you see at flea markets, guns shows, and in martial arts magazines. That's because they are laser cut from high carbon steel that's been heat treated to a hard spring temper before sharpening and then given a black, baked-on epoxy finish to protect them from the elements. All three share the same sized diameter, but are varied in weight class due to the differences in steel thickness among the three models. Maximize your fun and get all three sizes! These are the stars that stick every time, the Sure Strikes from Cold Steel.

WEIGHT	14.8 oz.	32oz.	2.8 oz.	4.2 oz.	6.4 oz.

## TORPEDO®

Heavy and perfectly balanced, the Torpedo® is a lot of fun for target throwing. The double tapered points slide effortlessly from the hand for a perfect release and offer twice the sticking potential of a conventional throwing knife. What's more, the heavy 2 lb. weight lets you stand way back from the target (20 yards or more) and really "lob them in there" with surprising force. At 15", the Torpedo® is the longest throwing knife we know of. Thrown over hand or side-arm, it cuts a wide swath, dramatically increasing the chance of intercepting rising birds or fleeing small game. The Torpedo® is made from cold rolled 1055 Carbon steel. It is zone heat treated to provide maximum resistance to breakage.

## RPG™

Our RPG™ rockets through the air like its famous namesake and impacts on target with explosive force. It's fun and simple to use; wind up and throw it as if it were a baseball, and watch it fly, end over end, whizzing through the air until it "thunks" hard and deep into a target, or pulverizes the objects it hits into tiny pieces! It's twin points and heavy handgrip make it easy for even a novice to "stick" a throw, and in an emergency allow it to function as a formidable bludgeon or double pointed dagger. The RPG™ is drop forged out of 1055 carbon steel and "zone" heat-treated, making it practically indestructible and ready for action. Our thanks to Shai Amisar for his design influence and help in the creation of the RPG™.

SHAI AMISAR

## MACHETES

The machete has proven to be the ultimate outdoor and survival tool. It will cut, chop, slash, or smash just about anything you can put in front of it. It can be used to kill both fish and game and will also field dress and prepare them for the table as well. And when you look at its meager cost, it's got to be one of the best bargains for the money.

These blades are made out of 1055 Carbon Steel with a tough spring temper and are surfaced with a black, baked-on anti-rust finish. Each Cold Steel® machete comes with a good utility edge which, with just a little work, can be made hair shaving sharp.

The tough, Polypropylene handles of our machetes are designed to provide a comfortable secure grip, and they are rugged enough to resist chipping, cracking or breaking, so they last practically forever.

## KUKRI MACHETE

There's no single edged weapon that we can think of that can out-chop or out-cut a good Kukri. It's true that some of the best Kukris, like our Gurkha model (see page 28), can be somewhat expensive, and while that "thoroughbred" performs extraordinarily well for the money that it costs, it sometimes seems that what's required is a good, inexpensive, "workhorse" model.

Our Kukri Machetes are those workhorses. They are available in two sizes, one has a thirteen inch blade and the other, our "Magnum" model, has a whopping seventeen inch blade. Both are ready to plow through the toughest chores life can dish out. Each features the distinctive weight-forward balance of our "top-of-the-line" model, and always present their edge on an angle so they're guaranteed to "bite" deep with every stroke. Additionally, they come complete with a sturdy Cordura sheath! They're a solid value, ready for long, hard work.

## HEAVY MACHETE

The heaviest machete we make (with the exception of the Two Handed model). The blade widens toward the tip for maximum cutting and chopping power.

## BOLO MACHETE

Known throughout Asia and Pacific Rim, the Bolo Machete features a "fat" point that shifts its weight forward where it can do the most good when heavy chopping or slashing is called for. As a survival tool, it will open a coconut or chop down a tree with equal ease.

## PANGA MACHETE

The standard machete for the entire African continent. It's excellent for cutting thick brush and chopping down saplings and small trees.

## LATIN MACHETES

Have you been looking for a machete with extra reach and leverage? Perhaps something with a more traditional style blade and handle? Then Cold Steel has the tool for you! Our Latin Style Machetes are available in three blade lengths from 18 to 24 inches. With their non-slip, wear resistant handles, they are perfect in almost any environment from the jungle to the forest or even on the farm.

## ORIGINAL TWO HANDED MACHETE #97THM

**SPECIFICATIONS:**  
 WEIGHT: 30.9 oz.      BLADE THICK: 2mm      BLADE LENGTH: 11 1/4"  
 OVERALL: 32"      HANDLE: 20 3/4" POLYPROPYLENE  
 STEEL: 1055 CARBON STEEL W/ BLACK BAKED ON ANTI RUST MATTE FINISH

Some big cutting jobs are often best handled by using both hands and that's where our two handed machete comes into its own. Its long polypropylene handle and tough 1055 carbon steel blade give you the leverage to cut down small trees as well as thick brush and tangled vines. Weighing just under two pounds and measuring 32" in overall length, it's light and

compact enough to lash to your pack and is a natural to stash in your vehicle, boat, or airplane.

In a self defense emergency, the Two Handed Machete will also double as a highly effective sword. It's light enough to be swung with either one or both hands.

## TWO HANDED PANGA MACHETE #97THPM

**SPECIFICATIONS:**  
 WEIGHT: 37 oz.      BLADE THICK: 2.8mm      BLADE LENGTH: 16"  
 OVERALL: 36 3/4"      HANDLE: 20 3/4" POLYPROPYLENE  
 STEEL: 1055 CARBON STEEL W/ BLACK BAKED ON ANTI RUST MATTE FINISH

If you like the look and cutting power of our traditional African Panga Machete (see page 68), you're going to love the two handed model.

It's ideal for even the biggest jobs and will shear through small trees, saplings, limbs, vines and thorn bushes with equal abandon. An excellent companion whenever you venture out into the field or forest it's tough as nails and will provide years of hard faithful service.

SEPARATE SHEATH AVAILABLE #SC97THPM

## TWO HANDED KUKRI MACHETE #97THKM

**SPECIFICATIONS:**  
 WEIGHT: 33.1 oz.      BLADE THICK: 2.8mm      BLADE LENGTH: 14"  
 OVERALL: 34 3/4"      HANDLE: 20 3/4" POLYPROPYLENE  
 STEEL: 1055 CARBON STEEL W/ BLACK BAKED ON ANTI RUST MATTE FINISH

Our two handed Kukri Machete offers so many advantages as a tool or weapon that it's hard to know where to begin when attempting to describe them. Small trees saplings, vines, thorn bushes, cane, reeds, bamboo, corn stocks and sugar cane all fall to its over sized blade and very long handle. When two or four legged predators threaten, the two handed Kukri will make short work of them as well, as its broad, down turned blade features a surprisingly sharp point capable of piercing the toughest hide or lopping off the most massive limb. And, as an added unexpected bonus the two handed Kukri can be thrown up to 10 yards with surprising accuracy and incredible penetration.

SEPARATE SHEATH AVAILABLE #SC97THKM

## TWO HANDED KATANA MACHETE #97THK

**SPECIFICATIONS:**  
 WEIGHT: 33 oz.      BLADE THICK: 2.8mm      BLADE LENGTH: 19"  
 OVERALL: 35 1/2"      HANDLE: 16 1/2" POLYPROPYLENE  
 STEEL: 1055 CARBON STEEL W/ BLACK BAKED ON ANTI RUST MATTE FINISH

Have you ever longed to pick up your expensive, high performance Samurai sword and run amok through the woods stabbing, cutting, chopping and hacking every inanimate object in sight without the fear of losing all your hard earned money by damaging it?

That's why we created the Katana Machete. Made in our factory in South Africa, it offers a 19" long blade with a modified Tanto style point. Heat-treated to a tough spring temper and sporting a black, baked-on anti-rust finish, it comes with a good utility edge that can easily be fully sharpened.

To facilitate one or two-handed use, we have paired the blade with a long handle, complete with a sturdy cross guard. Injection molded over the blade's tang, and further secured by two thick bolts, it shrugs off hard knocks and defies the elements.

SEPARATE SHEATH AVAILABLE #SC97THK

## SAMBURU SPEAR

The Samburu spear breaks down into three components: The first is the spear head itself, permanently welded to a 3/8" thick steel shaft. Second is the counter balancing butt spike also known as the shoe. This is used as an alternative point for practice throwing, preserving the actual spear blade itself for more serious work. Third is the black, hardwood handle with a double taper connecting the head and shoe.

Our Samburu spear comes unassembled for ease of transportation. All you have to do is fit the blade and butt spike tightly to the handle and attach them with the provided retaining screws.

This spear could be described as the 300 Winchester Magnum of the spear world. It can be used at long range, flies straight, has a flat trajectory, hits hard and penetrates deep. Like the 300 Win Mag, it can be used to take any animal in North America.

**NOTE: WE'VE MADE OUR SAMBURU SPEARS AS TOUGH AS POSSIBLE. HOWEVER, IF YOU BEND YOUR SPEAR SHAFT OR "SHOE" (BUTT SPIKE), IT CAN BE EASILY STRAIGHTENED IN A VISE OR WITH A HAMMER, AND THE TOUGH HICKORY HANDLE OF YOUR SPEAR CAN EVENTUALLY BREAK, SO PLEASE BE PREPARED TO REPLACE IT.**

**SPECIFICATIONS:**  
 OVERALL: 7 FT.  
 WEIGHT: 2 LBS. 8 OZ.  
 STEEL: 5150 STEEL  
 HANDLE: HICKORY  
 SOME ASSEMBLY IS REQUIRED.

THE SAMBURU SPEAR IS MADE OF THREE SEPARATE PARTS, MAKING IT VERY EASY TO TRANSPORT OVER LONG DISTANCES.

## ASSEGAI

The spear is one of man's oldest, reliable weapons. Early examples were no more than sticks or poles with fire hardened points. As man learned how to knap flint, cast bronze and forge metals he would quickly adapt these technologies to the spear.

The spear, when used as a thrusting weapon, allowed one to dominate any enemy armed with a shorter weapon like a mace, axe, sword or even a bayonet. When thrown, the spear enabled man to bring down the largest predator while staying safely out of reach of fangs or claws.

With cold forging technology pioneered by Cold Steel®, we can offer high performance thrusting and throwing spears at reasonable prices. All come with premium American Ash shafts and SK-5 medium carbon steel heads. Like traditional spearheads, ours are heat treated and then drawn to a tough spring temper. The concept is that the spear head should flex or bend under impact stresses rather than break or shatter.

The original Assegai was invented by the legendary Zulu King, Shaka in the early 1800's. Its long, broad blade and short handle were ideal for thrusting and revolutionized tribal warfare in Southern Africa. Our Assegai has all the features that made the original so deadly. It is available with a short shaft for thrusting or a full length throwing shaft.

## BOAR SPEAR

For 200 years, the boar spear reigned supreme as the staff weapon of choice in the forests and often the battlefield as well. Only the invention of reliable firearms in the 18th century could fade its renown. It would have disappeared altogether if not for the decadent tastes of the Northern European nobility. To them, hunting with a firearm was a pale substitute for the thrill of hand to hand combat in the forest with nothing but a spear.

You too can enjoy the same excitement with Cold Steel's® modern recreation of this classic spear. Cold forged out of medium carbon SK-5 steel and heat treated to a spring temper, the massive blade is designed to flex under stress instead of breaking. It has an overall length of 18 1/2" and weighs a whopping 1 1/4 pounds! What's more, each blade comes fully sharpened to a utility edge and features a sturdy reinforcing rib to make it as stiff as possible for maximum penetration. The spear head comes with an extra stout premium ash shaft.

## DROP FORGED TOMAHAWKS

These superb tomahawks are precision drop forged from 1055 Carbon steel. Drop forging is, without doubt, the best method of manufacture for any impact weapon, particularly one with a cutting edge. During the forging process a metal ingot is heated almost white hot and then formed into shape in a series of progressive dies. The large steel dies are fixed to enormous compressed air hammers. Each die hammers the hot metal into a gradually more finished shape. The steel is kneaded and compressed into

a completely homogenous mass making the grain structure uniform and minimizing gas pockets or other imperfections that can ruin the construction of a hand forged hawk. This is why most good axes, hatchets, and hammers are drop forged. These hawks are differentially heat treated. This means that the cutting edge and hammer face is fully hardened, while the balance is left relatively soft to absorb the shock of striking blows.

THE AMERICAN TOMAHAWK COMPANY  
IS A DIVISION OF COLD STEEL, INC.

## RIFLEMAN'S HAWK

The Rifleman's Hawk has a functional hexagonal hammer poll designed for serious work, like pounding nails or stakes. Reminiscent of some early American designs, the Rifleman's Hawk features the "peace pipe" appearance that was commonly used by Native Americans during the last century.

In terms of fun and sport, this hawk throws and sticks extremely well. If you want something that hits its target like the proverbial "ton of bricks," then the Rifleman's Hawk is for you!

## TRAIL HAWK

Modeled after an early frontier pattern, our Trail Hawk can do it all. It's an excellent chopping tool and has a functional hammer poll with a hardened face so you can drive nails, hammer in stakes, and smash or crush just about anything. Best of all it's extremely lightweight and compact so it's a cinch to tuck it under your belt or lash it to a pack or shooting bag.

## TRAIL BOSS

The Trail Boss is light and compact enough to carry all day in your hand or strapped to your pack, yet heavy and tough enough for chores that would make a hatchet or tomahawk scream for mercy. Featuring a European style head with a 4" blade and a 4 1/2" cutting edge, it takes a big bite with every swing. Plus, it features a very stout straight-grained Hickory handle.

Extensively field-tested by Lynn C. Thompson on a month long hunting trip in the out-back of Australia, the Trail Boss was really put to the test. He used it to chop kindling, clear roads and trails, to build blinds and even to chop down a fair sized Gidgee Tree (one of the hardest woods found down under).

## VIETNAM TOMAHAWK

It took Peter LaGana a lifetime of armed combat and months of design and testing to perfect the Vietnam Tomahawk. Now, there's an exact replica of this historic weapon.

Like the original Vietnam Tomahawk, our copy is light enough to be carried all day without causing undue fatigue. In combat, this lightness translates into speed; allowing quick changes in direction, even in mid-stroke!

The blade of the "hawk" offers a wide, upswept primary edge for tremendous cutting, slashing and chopping potential. The secondary edge on the lower side of the head is specially curved and partially sharpened for both a cutting and hooking attack. When combined with the "V" shaped spike on the back of the hawk head, it is wickedly efficient. It comes complete with a leather sheath in the original oxblood color.

## FRONTIER HAWK

Suitable for re-enactors from any period stretching from the French and Indian War clear up to the final settling of the West in the late 1800's. The authentic, good looking Frontier Hawk is one tough customer you're sure to appreciate.

This light weight Hawk is a joy to use too as it reduces wrist, elbow, and shoulder strain without sacrificing anything in chopping power or ease of handling.

The merits of its light weight are revealed in combat too because the Frontier Hawk can be used at light speed from any angle and immediately recovered!

## NORSE HAWK

During the 10th century, Viking raiders were a familiar and dreaded sight. Ranging as far north as Russia and as far east as Constantinople, the Vikings wielded their terrible, fearsome battle ax.

The influence of the Viking weapon indeed far out-last the reign of the Vikings themselves. Its sleek lines and brute strength may be seen today in axes, hatchets and tomahawks.

Our hawk has a curved cutting edge to facilitate deep, slashing cuts and terminates in two sharp points which are useful in hand-to-hand combat. The bottom point may be used to capture an opponent's shield, leg, arm, shoulder or neck, momentarily immobilizing or bringing him closer so that he'll be easier to deal with. The top point may be used to execute direct chops or, with a thrusting motion, to pierce or gouge. The Norse Hawk is like its ancient Viking ancestors; merciless.

## WAR HAMMER

Medieval war strategists developed this effective solution to the problem of plate armor, which is impervious to most swords but completely vulnerable to the War Hammer.

The heavy hammer head could crush the strongest helmet or suit of plate armor with just a few blows and the back spike could rip through like a modern can opener! Now Special Projects brings you an inexpensive, yet highly effective, recreation of this awesome weapon. It includes a straight grain 30" long American Hickory handle, providing tremendous leverage so enormously powerful blows may be struck. To protect the handle from assault by an opponent armed with an edged weapon we have included a pair of sturdy steel langettes.

TRENCH  
HAWK

## TRENCH HAWK

Our Trench Hawk may well be the perfect antidote to the raw terror of eyeball to eyeball combat in the confined spaces of a trench, bunker, alley or narrow hallway.

All it takes is one stroke from either the vicious cutting edge or its brutal wedge shaped spike to end the fight, and if the party starts at longer range the Trench Hawk's twin "business ends" make an accurate throw a breeze, since there's double the chance of a lethal hit.

When used defensively, the Trench Hawk's cutting edge and spike also provide a big advantage, as either can be used for hooking or trapping and, like our Spike Hawk, their combined length can be used to parry or block an incoming blow.

Drop forged from 5150 carbon steel and differentially hardened, the head of the Trench Hawk will withstand tremendous blows and the awful stress of continued throwing.

The handle of the Trench Hawk is also highly resistant to shock and impact and will withstand abuse that would easily break even a tough hickory handle. And, as an added benefit, is easily and cheaply replaced when finally worn out or broken from repeated throwing (NOTE: any handle can, and will, break eventually).

Finally, to help protect its owner from its cutting edge and dangerously sharp spike, it comes with a patented Secure-Ex™ sheath that features a cleverly articulated design.

WEIGHT: 24 oz.  
PRIMARY EDGE: 3 1/2"  
HAWK LENGTH: 8 3/4"  
OVERALL: 19"  
HANDLE: POLYPROPYLENE  
STEEL: DROP FORGED  
1055 CARBON

## SPIKE HAWK

While it's certainly capable of performing utility chores, our Spike Hawk really excels when it's used as a weapon.

With one highly effective edge and a long spike, it puts any adversary on the horns of a fierce dilemma: Face the edge in brutal chopping, cutting, slashing and gouging attacks, or risk getting huge deep holes punched in you by the fearsome spike.

To make matters even worse for an attacker, either end of the hawk can be used to hook or trap an opponent's weapon, neck, arm or leg, to control or manipulate the situation to one's advantage.

Furthermore, the overall length of the of the hawk measures 9" across making it a wide, stiff platform that can be punched into an incoming weapon arm to momentarily stop its forward motion and immobilize it.

A superbly crafted leather sheath designed to safely house the point and edge is available and sold separately.

## PIPE HAWK

Do you prize the look and authentic lines of a traditional Pipe Hawk, but have little use for the hollow bowl and the strength-compromised, drilled-out wooden "smoking" handle? Well here's a Pipe Hawk without those disadvantageous features.

Precision forged from 5150 carbon steel, the Pipe Hawk offers a long, reasonably wide cutting edge and a solid, fully hardened hammer poll that's turned and ribbed to mimic a hollow pipe bowl.

Fitted with a 19" hickory handle and weighing approximately 26 ounces it's heavy enough to be brutally effective as a chopping tool and weapon plus its solid bowl will drive nails, spikes and stakes with the power of a framing hammer.

## NIGHTSHADE® SERIES

Black as a moonless night and silent as the grave...these are the qualities that make up our lightweight Nightshade® series. Most are detailed reproductions of existing Cold Steel® favorites and some are new designs representing the newest trends in high-tech, covert construction. Made from Grivory™— the latest in fiberglass reinforced plastic, and stronger than even the super tough Zytel® we have used in earlier models— they are UV and heat stabilized, making them impervious to the elements.

One of the most unique features of these knives is their handles. They are made from deeply checkered Kraton® that has been molded directly to the blade tangs. The use of Kraton in knife handles is a Cold Steel® innovation that dates back to the early 1980's. It has been readily copied by most of our competitors because it offers a superior, slightly tacky, gripping surface that is unaffected by heat, cold, or moisture. It never rusts, warps, cracks or splits even in the most extreme environments.

Our Nightshade® knives are light enough to be tied, tucked, or taped just about anywhere on one's person. And, since they are impervious to heat, cold, moisture and extreme weather they are a natural to hide both inside and outside of your house. They can be hidden virtually everywhere from the hedges and flowerpots in your yard, to the refrigerator, bookshelves, and closets in your house. Keep one in every room of the house, from the laundry room to the bathroom shower! With violent home invasions on the rise a strategically placed Nightshade® knife could save the day, and even your life.

## FGX BATTLE RING

The ring dagger, has some distinct advantages and features that are unsurpassed by virtually any other knife.

Our FGX Battle Ring is distinguished by a short, broad, blade with a ferociously efficient point that resembles a shark's tooth.

Yet, it's the handle and ring that are perhaps its most appealing features. They've been precisely shaped and contoured to comfortably accommodate most hands, providing a perch to facilitate different grip options.

Because it's made from Grivory, it's impervious to heat, cold, moisture and extreme weather so you can hide it both inside and outside your house.

**SPECIFICATIONS:**

## CRUCIFORM DAGGER

The Cruciform Dagger has a carefully designed 3 1/2" long Stiletto blade and a 1/2" thick cruciform cross section that tapers to a needle like point. It features a somewhat unique cruciform handle, that's designed to facilitate almost any gripping method.

It's precision injection molded from Zytel®, for the ultimate in strength and stiffness. Zytel® is a tough, stiff nylon and fiberglass composite that contains no metal and is impervious to the elements.

It's particularly appropriate in glove compartments, travel luggage, or a handbag and will look perfectly natural in virtually any environment. It's lightweight, and effective, making it an ideal self-defense weapon.

## RUBBER TRAINERS

Now you can practice with some of our most popular knife designs, in relative safety, with our rubber training knives. We have rubber training versions of our Peace Keeper I, the R1 Military Classic, Recon Tanto, and the Black Bear Classic.

Each has been carefully fashioned to look as realistic as possible so they can be effectively used in solo practice, training drills, disarm drills, and demonstrations and any other activity where you want a reasonably close approximation of realism but not the extreme danger and risk associated with an actual knife. The Santoprene rubber blades are soft enough to prevent the likelihood of most bodily injury. They do however, have a level of firmness that might cause injury to the face or the eyes, so it is recommended that appropriate eye protection or a fencing mask is utilized at all times when using a Cold Steel® rubber training knife.

## KOGA SD

Bob Koga began his martial arts career at age 12 starting with Judo and moving on to wrestling in high school. After graduation Bob joined the Air Force and, while stationed in Japan, he resumed his Judo training as along with Jiu Jitsu, Jo-do and Aikido. After finishing his stint in the Air Force, Bob moved to Los Angeles where he joined the LAPD. During his tenure with the LAPD, Bob became an outspoken proponent of the straight baton as opposed to the PR24® or side handle baton.

The Koga SD's are made of virtually unbreakable plastic, and can increase the ability of the average person to defend himself several times over. With proper training, they can function as a fantastic aid in leverage when obtaining joint locks or submission holds. But

where they really shine is as an intermediate impact tool. You see, police and civilians alike face a perplexing dilemma when contemplating employing fist or baton blows. Blows struck with the fist may be too weak, or worse, result in a broken hand, while blows struck with a baton may be too powerful resulting in grave injury or even death. The Koga SD's however, solve this problem, neatly bridging the gap by concentrating and magnifying the effect of hand blows while minimizing the likelihood of permanent injury or death. If you're looking to expand your continuum of force options in a self-defense situation, we heartily suggest you buy a Koga SD.

## ESCRIMA STICK

#91E  
ESCRIMA  
STICK

Since 1980, when he first read Guru Dan Inosanto's book, "The Filipino Martial Arts", our President, Lynn C. Thompson, has diligently studied and trained in these disciplines. Lynn's extensive sparring experiences, combined with his study and training had an immeasurable impact in shaping Cold Steel into the company it is today.

Our Cold Steel Escrima Stick resembles a traditional rattan stick in length, weight, and cross section, it is however, much more durable because it's injection molded from super tough black polypropylene. It measures 32" long and is 1" in diameter and weighs a little over 15 ounces.

Unlike rattan, it resists mildew, and won't dry out, warp, crack, splinter or shrink, and with the use of a saw, it can easily be modified to any length. Plus, like our baseball bats, Bokkens, and African Walking Stick, it is easy to clean and is so resistant to impact stresses and the elements, that it is virtually unbreakable and practically indestructible.

We're confident that stick fighting enthusiasts and the Filipino Martial Arts Community will want to add one or more of these sticks to their training arsenal.

SPECIFICATIONS:  
WEIGHT: 15.6 oz.  
THICK: 1"

## HONEY COMB

#92HC  
HONEY COMB

SPECIFICATIONS:  
WEIGHT: 2.2 oz.  
OVERALL: 7 7/8" w/o BRUSH  
8 1/4" w/ BRUSH

Look smart and feel secure anywhere with our personal grooming aid, the Honey Comb. Precision manufactured at great expense, it has the innocuous appearance of a simple hairbrush, but the fully functional brush also acts as a sheath that conceals a highly effective stiletto dagger! The 3 1/2" long dagger has a 1/2" thick cruciform cross section and tapers to a needle like point, while the superbly designed handle is designed to facilitate almost any gripping method.

For the ultimate in strength and stiffness, the Honey Comb's cruciform dagger has been precision injection molded from Zytel® a tough, stiff nylon and fiberglass composite that contains no metal and is impervious to the elements.

With its innocent appearance and usefulness both as a dagger and a hairbrush, we believe the Honey Comb is the all around answer to personal defense at home at work or overseas.

As a hairbrush it's particularly appropriate in glove compartments, travel luggage, or a woman's handbag and will look perfectly natural in virtually any environment. Its light weight, and effectiveness make it an ideal self-defense weapon especially for women. It's a great value for the money and is easily appropriate gift for Christmas, birthdays or graduations.

## POCKET SHARK®

As the saying goes, "the pen is mightier than the sword." Indeed, Cold Steel® makes some mighty strong swords, but this little pen makes for some clever competition. It's the biggest, baddest, permanent marker around!

Superficially, it shares many features common to most markers, but appearances can be deceptive. For starters, it's made from high impact plastic, and features walls that are 4 times thicker than similar markers. This means it's built for impact and, in a self-defense emergency it can become an efficient Yawara stick for driving off an attacker. Plus, the screw-top cap will stay in place and won't pop off like a regular marker's cap would when you strike a percussion blow, or when obtaining joint locks or submission holds.

It's easy to carry too. Just clip it to a shirt or coat pocket, or carry in your purse, pack or brief case!

## BROOKLYN SMASHER® & BROOKLYN CRUSHER

"It's unbelievable. We're seeing eight to 10 bats break every game. Guys are coming back saying they hit the ball on the sweet spot and it still broke." This quote caught our President, Lynn C. Thompson's attention. It's from an article in the Los Angeles Times describing how frequently baseball bats break and nearly injure the players in major league games. The article chronicled the debate currently raging among players over which bat is better, those made of ash, which is lighter and slightly flexible, or those made of maple which is heavier and stiffer. As he read, Lynn began to suspect there might be a market for a baseball bat that was highly resistant to breakage. What kid, let alone an adult, wouldn't want a virtually unbreakable bat?

Because they're precision injection molded out of heavy-grade polypropylene, the Brooklyn Smasher® and the Brooklyn Crusher resist breakage. There's no need to worry about shards of wood flying in your face. No matter what you hit or how hard you swing them, they're virtually unbreakable. And they're durable too, they won't rot, crack, or splinter, or even fade. You can treat them as roughly as you choose. You needn't worry about dirt or the weather affecting them either since they're impervious to the elements and clean up with soap and water. Try that with a wood bat and you might damage it.

They're versatile too. Like any other baseball bat, croquet mallet, golf club or hockey stick, they can be used in an emergency, as an extremely effective self-defense tool. You can keep one behind the front door, under the bed, or in a car trunk and forget about it until you need it. They can be used as game bats, practice bats, warm-up bats, loaner bats, inclement weather bats, school or league bats or kid's bats. They can also serve as cross over trainers to develop strength, agility and eye hand coordination for those studying Western Saber Fencing, Kendo, Kenjitsu, Filipino Stick and Sword Fighting and Chinese martial arts.

Best of all, they make good economic sense. With a suggested retail price of \$45 and \$40 they're comparable in price to good wooden bats, and since they're virtually unbreakable they will last far longer than any wooden bat on the market.

STRESSES LIKE THIS WOULD SPLINTER A WOODEN BAT AND PUT A PERMANENT DENT IN AN ALUMINUM ONE, BUT THE BROOKLYN SMASHER® HOLDS ITS OWN!

## TRAINING SWORDS

The best of the world's sword fighters have known a simple truth for ages... if you want to become a reasonably good sword fighter you should endeavor to learn sword fighting techniques, footwork and the basic stances. However if you want to be a master at sword fighting you have to eventually start fighting with a "live blade". If your ultimate goal is to wield a razor sharp sword safely and effectively, you need to train with a sword that approximates the size, feel and heft of a live blade, yet minimizes the possibility of causing grievous, permanent, or life-threatening injury to yourself or your training partner.

This concept was implemented by the ancient Romans, who used dull wooden swords to train their Gladiators and soldiers. And Japanese Samurai used a wooden training sword that was called a Bokken. It's an elegant solution to a vexing problem and effective enough to still be used today. The only problem is that a wooden sword can rot, crack, chip or splinter and eventually become useless.

Cold Steel's solution to these dilemmas was to design a synthetic substitute, low in price and impervious to the elements. The Cold Steel line of Training Swords are made of the heaviest grade polypropylene available and closely duplicate a real sword in length, size, weight and feel. While they're not quite as rigid as wood, they have the winning advantages of being virtually unbreakable, remarkably stiff and cut resistant.

## GUNSTOCK CLUB

One of the truths of close quarter combat is that a rifle, shotgun or musket can be an improvised club in the absence of suitable ammunition or a bayonet. It's also true that an 8-10 lb. rifle, grasped by its long barrel and swung with both hands hits like a freight train and, if it doesn't break, will crush bones like dry twigs and pulp flesh into jelly.

American Indians in the early sixteenth century observed these facts and wasted no time in fashioning their own gunstock war clubs. These were made of specially chosen straight grain hard woods like Maple, Ash, Oak, Hickory or Hornbeam and weighed from two

to three pounds. They hit with remarkable force and proved to be extremely lethal weapons as their hitting power was often enhanced by the addition of a short lance point or one or more knife blades. In fact, the Gunstock war club became so popular it soon migrated West to the Great Plains and the Pacific coast where it endured as a weapon into the 1880's and as a ceremonial and dance weapon to this very day.

While there are a fascinating variety of historical examples we could have reproduced, ours was custom designed by blade smith Rich McDonald. He incorporated all the best features from our favorite clubs including the ridged center line, a short lance point, and the classic "Fawn's Foot" handle.

To avoid the risk of cross grain breakage, we have abandoned the traditional hardwoods in favor of Polypropylene. As you may know, this material is highly resistant to shock and is virtually unbreakable making it particularly suitable for use in this weapon. And as an added bonus, this material is highly resistant to the elements and won't warp, rot, shrink crack or splinter the way wood does.

For those interested in re-enacting various periods of our frontier history, we have given our weapon a very realistic wood grain finish. This means you can easily customize your club with "cut outs", brass studs, tacks, feathers, horse hair falls or the paint of your choice.

## INDIAN WAR CLUB

No one knows when the ball headed war club first appeared. It was in common use in the early 16th century and was popular with the war-like tribes of the American eastern seaboard, eventually spreading to the Great Lakes region and northern Canada all the way to the Great Plains west of the Mississippi.

It's been speculated that the wide adoption of this weapon was because it was relatively easy to manufacture, in that it required little or no metal, and because it was unspeakably effective.

The better clubs were carved from a naturally curved hardwood root burl, sapling or tree branch. This insured that the wood grain would curve in parallel lines though the handle and into the ball itself, avoiding the pitfalls of cross grain which could weaken the club and cause it to break at an ill-timed moment. Hornbeam (Iron Wood), a hard dense timber that was strong and was resistant to impact forces, was the most preferred material, even over such stalwart choices as Ash, Maple, Oak and Hickory.

In battle, a dedicated blow from the ball of the club could easily break a limb or crush a skull like a bat going through a watermelon. For added dynamism, and increased effectiveness, the ball was sometimes spiked with an antler, bone, knapped stone, or even iron.

Cold Steel president, Lynn C. Thompson, is an admirer of the ball headed club (especially after watching "Last of the Mohicans" about a dozen times) and when he saw an example made by custom blade smith Rich McDonald, he jumped at the chance to work with Rich to reproduce it.

Our version is approximately 2 ft. long and features a 3 1/4" inch diameter ball. It is fitted with a removable blunt, short steel spike.

Hornbeam is scarce and not readily available in commercial quantities, so our club is injection molded out of black Polypropylene which is virtually unbreakable.

It will never rot, crack, warp, splinter, swell, shrink, mildew, or fade. For historical re-enactors the surface has a realistic wood grain finish that can be easily customized with paint and can be ornamented with brass studs, tacks, or feathers.

## SLIM STICK

Our Slim Stick represents a new departure in the world of elegant walking sticks.

It's light as a feather, yet stiff and rigid enough to offer surprisingly good support when crossing wet, slippery streets or negotiating cracked broken sidewalks. It takes its inspiration from similar sticks used in the Filipino Martial Arts and Boxe Française (Savate). It's amazingly tough, strong, and blindingly fast.

The Slim Stick's incredible weight to speed ratio, combined with its strength and rigidity, is the result of the materials used in its fabrication. The mirror polished "dimpled" ball head is fashioned out of solid 6061 aluminum and double silver anodized to resist abrasion and tarnish.

But the real weight economy was achieved in the construction of its unique shaft. Spun on a custom made mandrel from 100% black and silver carbon fiber thread it's incredibly handsome and strong and, in our very severe impact tests, proved to be virtually unbreakable!

Plus, we have equipped the Slim Stick with a small but highly functional rubber ferrule, which really grips most surfaces and is easily replaced when worn out.

If you're looking for a new, cool stick that can be welded fast as light and provides real functional support and balance, then the Slim Stick is definitely for you.

SLIM STICK

## AFRICAN WALKING STICK #91WAS

The Zulus are perhaps the fiercest, most combative tribe in all South Africa. In the early 1800's the Zulu King, Shaka, subjugated the vast area of land between the Phongolo and Mzimkhulu rivers and laid the foundations for the Zulu Nation. Then in 1879 the Zulus handed the British one of the most humiliating defeats in history at the battle of Isandlwana, when they annihilated an entire column of 1200 Englishmen (who were supported by artillery and cavalry), and did it with little more than cowhide shields and their Assegais, or short stabbing spears. Even to this day, a Zulu tribesman is not somebody to be trifled with lightly.

The thing that distinguishes the Zulu people most is their fondness for using a Knob Kerrie, or walking stick. Our President, Lynn C. Thompson, who regularly hunts in South Africa, has amassed an impressive collection of these handmade sticks. Most of them are made from indigenous African hardwoods like Wild Olive, Pink Ivory, and Red Bush Willow, and are topped with a distinctive ball or knob.

**SOUTH AFRICAN KNOB KERRIES**  
AUTHENTIC SOUTH AFRICAN HANDMADE STICKS SERVED AS THE INSPIRATION FOR THE AFRICAN WALKING STICK

Adapted for the western marketplace, our African Walking Stick features the best parts of traditional Zulu Kerries; like an undulating shaft, and the traditional geodesic ball grip. However, instead of using a costly exotic hardwood, we've made ours out of black Polypropylene. This means that, in addition to being virtually unbreakable, it's also impervious to the elements. It will never rot, warp, crack, splinter, swell, shrink, mildew or fade, and it's ready for all the wear and tear you, and the world, can dish out.

Although its primary mission is to be a walking stick to aid one's balance when crossing uneven, slippery, wet or rough terrain, it can also serve as a pointer, lever, or probe. It also makes a formidable tool for self-defense in an emergency.

**SPECIFICATIONS:**  
WEIGHT: 25.3oz.  
LENGTH: 37"  
1 1/4" (BASE)  
1 3/4" (NECK)  
2 3/4" (BALL GRIP)

## IRISH BLACKTHORN WALKING STICK

The Blackthorn bush is found throughout Ireland and the British Isles. It has been prized for centuries as a material for premium walking sticks. The original Blackthorn sticks were 2 to 4 foot long Irish shillelaghs (the national weapon of rural Ireland). In expert hands the shillelagh was so fearsome that during the final occupation of Ireland, the English outlawed it. To get around the law, the Irish turned the shillelagh into a 3-foot walking stick. The English didn't want to appear unreasonable by outlawing walking sticks too, so the Irish kept their modified shillelaghs and the world gained a beautiful and functional walking stick known simply as the Blackthorn.

Cold Steel made the effort to obtain and sell authentic Blackthorn sticks over fifteen years ago, but the venture turned out to be disappointing, and not because the sticks didn't sell well. It was because Blackthorn is difficult to come by and, since it's grown and not manufactured, it is somewhat inconsistent in quality.

Cold Steel's recent forays into injected molded polypropylene products has yielded some impressive results and now we have produced a new polypropylene Blackthorn that has all of the advantages of real Blackthorn and none of its pitfalls.

Our Irish Blackthorn Walking Stick is inspired by an authentic Blackthorn from Cold Steel President, Lynn C. Thompson's private collection. It was copied carefully, and then artfully modified to a point where it not only mimics nature, but actually rivals and supersedes anything the natural world could produce! If nature had fashioned the most perfect Blackthorn stick, and you were lucky enough to come by it, our Irish Blackthorn Walking Stick is what it would look like. It's a superb faux Blackthorn stick, and since it's injection molded from polypropylene, it will never warp, crack, swell up, or splinter and is easy to maintain with a little soap and water.

# RAJAH SERIES

The Kukri's (see page 28) best attributes and enormous potential as a weapon and a tool have been well documented in our Proof DVD series. We've made different variations of the Kukri over the years, some with longer blades, and some with shorter, but never, until now, have we been able to offer one you can carry in your pocket as a folder.

**RAJAH II:** The Rajah II, designed by Andrew Demko, approximates the feel and heft of a fixed blade Kukri. For example, its broad, downward curved blade exhibits the best of a Kukri's characteristics as its unique shape presents the thin hollow ground edge at just the right angle so it naturally "bites" deep instead of bouncing or skidding off a target. And, its point is thick, wide, and sharp enough to pierce the toughest targets.

The handle of the Rajah II also shares some of the contours of a fixed blade Kukri with the addition of strategically placed curves and finger grooves. These features will facilitate 3 grip options. One; very close to the cutting edge where you can really "choke up" on the handle for fine or delicate work. Two; by the middle for ordinary cutting chores. And three; near the end or butt where you will have the maximum reach advantage and the most leverage and weight forward balance for heavy cutting or chopping.

Carry the Rajah II as you would any folder, using the ambidextrous clip to attach it to any reasonably sized pocket or clip it in your waistband. In an emergency all you have to do is grab it and open it with one hand in the conventional manner or snag its unique thumb plate on the edge of a pocket and snap it open.

The only suitable lock that can sustain the incredible impact forces generated by chopping strokes with our Rajah II is our Tri-Ad™ lock (see page 4). Designed specifically to take the pressure off the smaller, more fragile interlocking surfaces of a conventional rocker lock and transfer them to a uniquely positioned stop pin that will absorb and distribute them through the steel reinforced Grivory handle.

**RAJAH III:** The Rajah III is basically a scaled down, more pocket friendly, version of its big brother. Designed by Andrew Demko, it shares almost all the major features of the Rajah II including an AUS 8A stainless blade, Tri-Ad™ lock, thumb plate opener, ambidextrous pocket clips, and a Grivory handle with steel liners for extra strength and rigidity.

The Rajah III's handle offers a number of grip options due to its carefully sculptured shape and cross section and is particularly well suited to the reverse grip thanks to a unique thumb shelf built into the butt.
